PRETTY STRONG LANGUAGE

Used by English Newspapers on the Siamese Trouble.

They Warn France Not to Go Too Far—France's Demands Termed Blackmail

LONDON, July 24.—The Globe says the Siamese aggression is aimed at England. Siam is merely a "pretext," hence the duty of the British Foreign Office is one of extraordinary difficulty. England's place in the situation is paramount; firmness is necessary, for doubtless France is counting upon the feebleness of the British council. She is not hungry for war nearer home than the Mekong River.

The St. James Gazette says, "One thought conveyed by Siam's reply to the French ultimatum is that she has suffered enough humiliation from a small power that has been unfortunate enough to get in the way of a bigger one. But France has gone forth to grab and extort her desires at the cannon's mouth. We can endure the pillage of our colonies, but we cannot tolerate the pillage of Siam, China and Burma."

The rush of engines and patrol wagons and the clearing of the grounds greatly alarmed the people on the grounds.

Vegetarians' Views

Why They Believe in a Bi-Fare Minus Meat.

(Dr. de Neville in the Review of Reviews.)

One of the causes which have led to the doctrine of vegetarianism is the idea that it is inspired by religion, religious convictions and monastic mortification. But this is a grave error, for the rational vegetarianism of today is entirely scientific and dictated by the sole desire to follow a system conforming to the laws of nature. It has science on its side, and only the force of habit is opposed to it. The muscles become soft, and size diminishes, humanity degenerates, and it is kept in working order only by stimulants and tonics. The numerous maladies of the stomach and the rheumatism, from simple catarrh to the most serious diseases of the organs, are due to our appetite for meat and other stimulants. Vegetarianism, we are told by Dr. Bonjean, does not consist solely in the abstention of food, but is based on a dietetic axiom: 1. The general building power is derived from cereals, seeds, vegetables, tubers, fruits, eggs, milk and their derivatives. 2. The food, the air, and, in general, everything that is introduced into the body should show absolute purity, freshness, and entire absence of falsifications, mixtures and adulterations, even in the smallest quantities. 3. It is necessary, as far as possible, to eat only fresh vegetables, and to avoid dips at home, in order to reach the desired result.
