

patient then went out and the treatment was suspended. Meantime the temperature had come down to normal, the weight increased by 1,600 kg., the black patches disappeared from the mucous membrane, and the slight signs which had first been noticed at the apices of the lungs had disappeared. The author considers this was a case of cure (as far as it goes), and not a mere spontaneous remission in the course of the disease.

**PREGNANCY AND THE THYROID GLAND.** — Bignami (*Wiener med. Blatter*) reports the case of a patient who passed through her first pregnancy without trouble, but a bronchocele developed during the second, and the thyroid gradually returned to its original size after delivery. During the third pregnancy the swelling reappeared, and there was much constitutional disturbance, dys-
