Montreal, 24th. October 1921.

Dr. Lamb,  
Physical Education Department,  
McGill University,  
Montreal.

Dear Dr. Lamb-

I have just returned from our regular three days Conference of the Dominion Council of Health and would like to report to you my great success in spreading the gospel of preventive medicine in connection with University students. I gave copies of your leaflets from the Physical Education Department to the Public Health Officers of Manitoba, Saskatchewan, Alberta, New Brunswick and British Columbia as well as handing copies to the three other lay representatives who, with me, have the honour to be on this Council, and who represent respectively Rural Life, Agriculture and Labour. I also gave a copy to Dr. Fitzgerald who represents Laboratory work and who, as you know, is in charge of the Connaught Laboratories in Toronto as well as the Department of Health of Toronto University.

I outlined briefly preparations for early Session talks with the students when facts affecting the health of the student, that of his family and that of the community in connection with venereal disease are presented.

Dr. Seymour of Saskatchewan and Dr. Bell of Manitoba said that they would immediately take up such a plan and offer to give similar talks with demonstrations themselves. They were already in close touch with University authorities and apprehended no difficulty in forwarding such a programme. Dr. Orr of Alberta was to take the matter up with Dr. Tory and Dr. Rankin and said they were already planning progressive action along these lines. Dr. Roberts of New Brunswick was most interested and, as he is Minister of Health, we may hope for similar action in this Province. I did not have time to go into detail with Dr. Young of British Columbia.
