last fall by satisfaction an any one on, owing that your

succession, and I would not now change it for a "Brampton Machine" that has only run one short season. I firmly believe that Macpherson, Glasgow & Co. manufacture the best, least liable to get out of order, and the most durable machine made in Canada. I may also state that I have used one of their sawing machines this last year, and I can cut from eight to ten cords of wood in an hour. I sawed last week two cords of maple in seven minutes, and I would advise any one in want of "machines" to go to the Clinton Foundry, and support home manufacture.

W. HARRIS.

er Thresh- its work. leans well, ever saw e by your othing. I intending

Mr. Wm. Greive, of the 2nd con. McKillop, lately threshed on the farm of Frank Fowler, Huron Road, near Harpurhey, eighty-one bushels of oats in fifteen minutes. Mr. G. says the oats were of the finest quality—in fact, the best he had ever seen. The machine used was the Climax, manufactured by Glasgow, Macpherson & Co., Clinton. This undoubtedly was good threshing, but Mr. Greive did a still bigger thing on the farm of Mr. John Greive, six miles north of Seaforth, without intending to do it, as it was not even intended to measure the wheat; but some of the bystanders suggested that they should do so, as Mrs. Greive, the mistress of the house, had kept the time without informing Mr. Wm. Greive, the owner of the machine, that she was doing so. After measuring the spring wheat in question, it was ascertained that Mr. G. threshed one hundred bushels in forty-five minutes, the wheat being so clean that it was ready for market. We believe this can hardly be equalled—certainly not beat—in the country or out of it.

CAMDEN, CO. KENT, Feb. 6, 1872.

MESSRS. MACPHERSON, GLASGOW & Co., Fingal.

GENTS,—The Climax Double Cylinder Threshing Machine bought from you last season gave in all respects the best satisfaction, both to ourselves and to all for whom we threshed. For lightness of draught, fast threshing, and for separating the grain from the straw, it is not equalled in Ontario. We have threshed one hundred bushels of wheat in one hour, and on another occasion sixty bushels in thirty minutes. For threshing damp grain it cannot be equalled, or for durability and completeness in every respect. We cheerfully accord the merits claimed.

Yours truly,

ANDREW WELDON.
JOS. HANNAN.

KINGSTON, Jan. 16, 1872.

MESSES. GLASGOW, MACPHERSON & Co., CLINTON.

GENTS,—The Climax Machine purchased from you last fall at the Provincial Exhibition at Kingston has given us every satisfaction, and also to those for whom we have threshed. We have threshed barley at the rate of three bushels per min-
