Spectacles
The undermentioned advantages are claimed for Mackenzie's spectacles, 1st—That from the peculiar construction of the Glasses they Assist and Preserve the sight, rendering frequent changes unnecessary. 2nd—That they confer a brilliancy and distinctness of vision, with an amount of Ease and Comfort not hitherto enjoyed by spectacle wearers. 3rd—That the material from which the Lenses are ground is manufactured especially for optical purposes, by Dr. CHARLES BARDOU'S improved patent method, and is Pure, Hard and Brittle and not liable to become scratched. 4th—That the frames in which they are set, whether in Gold, Silver or Steel, are of the finest quality and finish, and guaranteed perfect in every respect. The long evenings are here and you will want a pair of good glasses, so come to the Medical Hall and be properly fitted as we cheerfully.

FLATS AT RAILWAY STATIONS.
It is the intention of the London Central Railway company to erect handsome mansions over its stations, to be let out as residential flats. At some stations attractive business premises will be added. The company hopes in this way to get back some of the money invested for station sites. The station buildings are now only one story in height, although occupying some of the most valuable ground in London.
ACCORDION PLAINS POPULAR AGAIN.
Accordions-plains skirts are in vogue, and all young girls should rejoice, it is so easy for them to achieve pretty party gowns with the plaise au soleil, as the French call it.—January Ladies' Home Journal.

The Sentimental Chappie

Continued.

Meantime I shot things and recovered some. Of course, mentally and intellectually, Triggs is nothing. Men who live all their lives in the most energetic and who retain effective Tory principles, and only read the Times and the Field, cannot be said to have their hand on the pulse of the hour, don't you know. Conversation with Triggs has become an irritant to me. He is a great-grandfather, and he glories in it. His unflinching refusal of my suggestion is this: "Change? Why? It was good enough for my ancestors. I'm no better than they were. What's the use of changing?" So, amongst other atrocious habits he turns day into night and vice versa at ten o'clock, and gets up at half past six, or some godless hour of that kind. You must try and fall in with a faddy Johnny if he happens to be your host, so I proposed a compromise between my hours and his. If he'd split the difference and gone to bed at two or thereabout, and risen at eleven or so, I would have said nothing; but no, his ancestors went to bed at ten, at least he fancies they did, what's the use of changing? The weather changed to be fine and warm, so when Triggs retired I generally strolled out into the grounds and smoked and turned over ideas. My host had a grand garden, with a lot of other luxuries. Here I walked by ghost's walk in it, and a fish-pond in moonlight while Triggs slept. I wandered by the lake and heard the fish splash, and saw great silver circles wide dimly at the water, where they had risen. I listened to the ovals uttering weird cries; and, from high above the ripe horse-chestnuts would come suddenly bumping down, with a rattling through the autumn leaves, and a thud on the ground, breaking the deep silence of night. The ducks kept respectable hours too. When they saw me they would hurry to load several quacks across the lake. A duck will eat at any or all times.

And here I am on the threshold of my mystery! Triggs' cat. We met a few weeks ago, and I walked with him in the market to let me know. I also advised him to have his cat shot. The cat was there at the time, and just looked up, and then folded in his paws and arched, and went to sleep again. For by day he's an ordinary, unintelligent brute enough. It is only by night he gets so demagogically awake and clever and satirical. So I went to town, trying to see Edith and hear her voice and feel her little hand. My chip-pines had entirely departed. "D'you know the Corinthian? It's a snappy prize, and the mouth-piece of the Vampire Club. I read it in the train just to get in touch with the world again, for I'd been buried alive a week. It didn't seem as smart as usual, and the jokes struck me as if they were a little off. But that was the fresh atmosphere of Triggs' place still hanging about my mind, don't you know. Edith's eyes looked out of every page, and I couldn't get interested in anything but my own thoughts. At length, however, I came to a paragraph that did rouse and chain my attention. It ran thus: "Congratulations to chery Fred Soper, the genial 'Vampire,' Freddy has topped off good business to the tune of fifty thousand. Glasses here, boys, may men are not worldly; all tomcats are."

Here, then was Triggs urging one thing all day and Triggs' cat arguing for quite a different course of action. I sometimes wonder if the man who, since the world began, ever deliberately asked for a bit of advice and took it when he'd got it. Personally, I'd pretty nearly made up my mind between Chery Groom and my own way, to congratulate Soper. He was there, but somehow he didn't look so jolly when he was about the money, and he said he was too, and that it would be useless. Still, he didn't appear jolly. I made sure he had all wrong about Edith, but he was quiet as a worm, and restless and shifty. It occurred to me for a moment that he might have lamented his own matter, that didn't seem human nature, don't you know. Then, feeling that though of course Soper was a little cad, and didn't understand women, and had advised me to go and see Edith, just now, I might as well tell him how my opinions had changed—I did so.

"I've altered my mind altogether about Edith. I've come back to my own way, but I don't know how to tell you, don't you know." Soper turned blue. "Haven't you heard?" he said, faintly. "Nothing from anybody. I'm rather fagged. I should get a line from Miss Marchant, but I didn't." "You'll find some letters waiting at your rooms," he explained. I asked him if he was ill. Then, with a horrible effort, he said, "It's like this, you've changed your mind again. Well, other people change their minds too. They ought to have sent on her letters and—"

"You're!" "Yes, mine," he answered, and I saw his fat hands were shaking and his black eyes squinting like a crab's. "The truth is, Miss Marchant felt she'd made a mistake, and couldn't live her life with you, and—and—" "Who's the new Johnny?" was all I could manage to say. "I am," he answered, bristling up like a dog in a fight. "You needn't look like that. It's all fair in love. I didn't cut you out. You cut yourself out. Somebody told her why you'd cut her away." "Who could have told her? Only one man." He tried to lie to me, but the lie stuck in his throat. It was what theatrical jobs call a "tableau, don't you know; and I could have sworn I saw Triggs' cat on Soper's shoulder, winking those damnable green eyes at me.

Certainly words flashed into my mind. I had a sort of inspiration that a chappie ought to get once in a while. I said: "You asked her to marry you and your fifty thousand pounds. She looked into your face and then hung her head down. She stole her hand into yours and said, 'Haven't you seen that I love you? Why, dearest, I love you as I have never loved or thought I could love. It's not money I want, but love. I'll make you a good little, true little wife; and I thank God for bringing such happiness into my life.'" Soper turned several colors that I had never seen before anywhere. He looked at me with his mouth open and nodded in spite of himself, keeping time to the words I said. And Triggs' cat nodded too. I laughed. People think I've got no sense of humor, but I have, don't you know. "IT'S NOT MONEY I WANT BUT LOVE."

TEA IS POPULAR IN RUSSIA.
Tea was first imported into Russia in 1638. To-day each inhabitant consumes on the average nearly one pound annually. The total consumption is 100,000,000 pounds and the total cost about \$80,000,000. Tea and sugar together cost Russia about \$250,000,000 per year. For brandy, beer and wine the country expends annually about \$500,000,000, so that something like a quarter of the whole revenue of the state are annually expended on tea, brandy, wine and beer, with sugar. Exact statistics are not forthcoming, but it appears that the use of tea is increasing rapidly relative to the alcoholic beverages—a consummation devoutly to be wished.

INDUSTRIAL CONCERNS IN GERMANY.
There are at present in Germany 296 great industrial concerns which employ more than 1000 persons each. The total number of persons employed by them amounts to nearly 600,000 and the machinery in use represents nearly 700,000 horse power. The most important concern is the Krupp works in Essen, where 44,877 laborers are employed. Next to this comes the Hamburg-American Steamship company, which employs 14,648 persons on sea and land.

THE WINGLIKE SLEEVES ARE VERY TRYING.
The Algon, or turn-over, collar will be much less worn with the spring weather, writes Miss de Forest in the January Ladies' Home Journal. I should be quite careful, too, making any exaggerated sleeve and iron. It has long arms and slender figures to look well in the wings like appendages of this winter. Many very smart women have clung persistently and very sensibly to the old-fashioned coat sleeve.

THE WAY OF THE WORLD.
"The people who are so willing to throw old shoes at a couple when they get married," remarked the Observer of Events and Things, "are the very ones who are content to throw nothing but insinuations at the same couple when they get divorced."

THE POWER OF LOVE.
Briggs—What does love amount to compared to money?
Griggs—A good deal. Why, I couldn't get any rich girl to marry me if she didn't love me.—Town Topics.

SANITARY BIBLE FOR COURTS.
A sanitary Bible, for use in court-rooms, is a new idea. It is bound in white celluloid, so that it can be readily washed and disinfected.

TYPHOID FEVER.
Inquiries made in Polynesian islands in New Guinea and West Africa indicate that typhoid fever does not occur in these regions, but seems to be a by-product of civilization.

JUST TALKATIVE.
While—Just a more question, pa. Our Sunday school teacher says I'm made of dust. Am I?
Pa—I guess not. If you were you'd dry up once in awhile.—Philadelphia Press.

PEACE IN SERVANTS' HALL.
No servant of the marquis of Salisbury complains to him twice of a fellow-servant. When a complaint is made the marquis dismisses the complainant. He keeps about 70 servants, and if he interfered in their squabbles he would have little time for affairs of state.

A PASSION FOR KNOWLEDGE.
What an abnormal thirst for knowledge your son seems to have. Yes; every now and then he lets go of a good job, just to see what will happen next.

SHUT HIM UP.
This seems a very healthy spot, my man, said the tourist to Giles, I suppose people don't die here very often. No, sir, they die very often!

HIS KNOWLEDGE.
Louise—Do you speak French?
Jack—Just enough to make myself misunderstood.—Puck.

THE ONLY TENDER PART.
Although I was late, said the new boarder, I found the landlady had served for me the tenderest part of the chicken.

QUEER STATE OF AFFAIRS.
The Dunes export the best and highest picked butter in the world, and for their own use buy cheap butter from the United States.

THE SOCIETY BEAUTY.
Do you think it's really any advantage for a girl to be beautiful?
Why, yes. It gives an additional asset to her ignorance.

About the House.

THESE HALF-WORN GARMENTS. "Does it pay to make over men's clothing for the children?" is frequently the topic of conversation among mothers, some maintaining that it does pay, others that it does not. If the mother is not strong, or already has her hands full, and if the purse is not greatly depleted, it certainly is economy to give the old garments where they are needed and buy new for the children. Also if the mother has a way of turning her extra time into money, as many women have, for the new garment is more quickly earned. But if one has more time and strength than ready money, it is just as certainly economy to make those old garments extra time of usefulness, and it is under these circumstances that the mother may justify herself in that pride and satisfaction that always accompanies the successful making of something new from something old.

Do not reject the garment because it is faded or rusty looking, but treat it to a bath in dyes after it is ripped and washed (follows the first task in making over). Vests are of no use whatever, the pockets spoiling them for recutting and the backs are usually too worn for use, so this leaves simply the buttons, which are just the size to use upon the legs of short pants. From a coat and trousers one can usually cut a suit, either a two-piece suit or a vestee, sometimes called a "middy" suit, for a boy by piecing the cloth, or one can squeeze out a reofer (with a small collar) for a boy or girl as large as seven years old. But the sailor-collared reofer require very large pieces. It is best to make one job of ripping and cleansing the discarded clothing. The cloth can be rolled and put away if not needed at the time, but it often happens where dyes are resorted to that cloth, very unlike originally, is made, by added strength of dye, to match up very well, so that one has more material to work from. Save all buttons, buckles, canvas interlinings and if they are in good condition, the linings (often the body linings) of coats are strong enough for use. The canvas is restored by ironing it while very wet. The goods and lining are washed in warm sudsy water and ironed upon the side that is to be the wrong side in the new garment. Never allow the iron to stand in one spot too long, for the print of the iron is sometimes almost impossible to remove. The cloth must be damp to iron well and in every heavy goods a scrapping motion of the iron is best. It prevents shrinking, which gives trouble until after the garment is made up and exposed to dampness, when if it returns to its former condition and hangs loose from the lining.

The frock coat or Prince Albert are both too out of use for little besides a suit vestee suit, a Fauntleroy jacket or a reofer for a five or six-year-old tot, for the back is useless on account of its seams and a new back must be made from the sleeve uppers, while the sleeve under only cut the uppers for the new garment. The sack or reofer coat has a good back to cut from, sometimes whole, sometimes one-seamed, but the front is so marked by pockets that it is almost impossible to obtain a robust sized jacket from it without piecing the front. The easiest way to obtain new fronts is to lay the pattern across the bottom of the old frock, but it is of course impossible if the cloth has an "up and down". The good portions of a pair of cast-off trousers make a pair of small pants, or for a very small boy his trousers may be made from this by close planning. When one has a jacket of the same goods, one can change about somewhat. For instance, cut the backs from the tops of sleeves and use the larger pieces of trousers for the coveted sailor collar to a small reofer. There seems to be a vast amount of cloth in a man's overcoat, but it is so cut that there is hardly enough to obtain an overcoat or reofer for the eight-year-old. Italian silk is much stronger for linings than other silks or farmer's satin and costs no more than a good quality of the latter. Where extra warmth is needed, cotton flannel in dark tones is used, the nap side out, but of course should not show as facings. Machine stitching or narrow woolen binding is used for jackets and vestees, also reifers, but a wide coarse molar reifer is very pretty upon reifers or overcoats of coarse texture. Careful pressing as one goes along is the secret of fine tailoring, also good buttonholes well flattened by the iron. The cost of a good suit or overcoat for a child under 10 years old is from \$4 to \$10. The cost for making over, including silk, new linings, dye, etc., is from \$50 to \$1, not counting time. Does it pay?

BEAUTIFYING BABY'S NOSE.
Only too often is an otherwise pretty face spoiled by an unsightly nose. Although all the care in the world will not make a Grecian profile out of a snub nose, yet it should be remembered that a snub nose rightly treated may be a feature of charm and piquancy, if not of actual beauty. Guard carefully against the use of the so-called "bumping the nose," as such childish accidents are almost sure to more or less permanently injure not only the beauty but the health of that member.

THE "BUMPING" BICYCLE RACE.
The bumping handicap is a form of cycle racing now very popular in England. The riders are placed five or ten yards apart from scratch to "limit." When the pistol is fired each man tries to catch the man ahead of him, and keep from being caught by the man behind. When caught a rider must drop out of the race. In such a race there can be no cheating. The riders, of course, do not actually bump against each other. The name is probably suggested by the English boat races, where the aim is to bump a lighter man who is ahead of him, described in "Tom Brown at Oxford."

NOT WHAT FRIENDS ARE FOR.
The only use some people have for friends is to make servants of them.

the nostrils are predisposed to dilate unnaturally, giving the idea of flatness, the mother or nurse should regularly press them together, say, mornings and evenings. Where the nose is a downright "snub" or gives indication of being undeveloped, much encouragement can be given its growth by swift, even strokes of the thumb and forefinger down first and then outward.

BATHING THE BABY.
Usually the baby's bath is the first event of consequence in his day. If it isn't, it should be, for the daily tub is a wonderful tonic to a robust infant. Healthy babies are usually easier for it and enjoy splashing about as much as a duck. The tub bath is the easier and quicker method of washing the child, but if it is a source of fright, a sponge bath must be substituted.

The temperature of the water should be 100 degrees in winter, and about 80 in the heat of summer. If a thermometer is not used to ascertain the warmth of the water, try it without error, as one's hand is not a trustworthy guide. It will be a surprise to discover how differently the water feels to the sensitive elbow.

Should baby be frightened at being plunged into the bath, try placing him in the empty tub seated on a dry towel, then gently pour water over it—usually succeeds in pleasing him.

A baby's skin is very delicate, so only a pure unscented soap should be used on it. Genuine castile, or the best quality of tur soap, are unequalled for this purpose. A soft piece of linen damask makes the best wash cloth and it should be strictly kept for this purpose alone, and must be well aired and dried each time after being used. Dry the baby carefully, especially in all the creases. Avoid using much powder. A little lightly shaken on absorbs any moisture inadvertently left after drying, but too much merely makes a most formidable ridge, and chafes the tender flesh. A flannel blanket or apron should be used to wrap the baby in while drying him, as if his wet body is exposed to the air too rapid evaporation may cause him to take cold. When thoroughly dry, bundled up in the apron, his mouth should be carefully and gently washed out in cool water, using an immediately clean piece of linen or muslin for the purpose.

THE "BUMPING" BICYCLE RACE.
The bumping handicap is a form of cycle racing now very popular in England. The riders are placed five or ten yards apart from scratch to "limit." When the pistol is fired each man tries to catch the man ahead of him, and keep from being caught by the man behind. When caught a rider must drop out of the race. In such a race there can be no cheating. The riders, of course, do not actually bump against each other. The name is probably suggested by the English boat races, where the aim is to bump a lighter man who is ahead of him, described in "Tom Brown at Oxford."
