

**Turner at York**

*In front of a capacity audience last Friday in Moot Court, John Turner, leader of the federal Liberal party, smoothly fielded questions on topics ranging from free trade to abortion.*

*Turner blamed Prime Minister Mulroney for his poor handling of the free trade negotiations, saying that Canada would end up being hurt economically and culturally if the process continues in the same fashion. The route Canada should take, according to Turner, is through sectoral agreements with the US while pursuing multilateral trade relations.*

*Turner feels Canada's abortion law is the best possible given the two diametrically opposed views, and a Liberal government would not change the statute. Turner said that there could be no reconciling those who believe abortion is murder and those who are pro-choice.*

**Perfectly Simple. Simply Perfect.**

Three calculators from Texas Instruments.

They're easy to use and there's one to make your everyday calculating tasks simple.

Each one features a sophisticated solar power system. That means you're not going to be let down by batteries when you can least afford it.

In a nutshell, the three calculators you see here reflect what we believe calculators are all about: they're fast, they're efficient, they're reliable and they're easy to use.

We're sure there's one for you.

To start with there's the TI-31 SLR which performs the 63 most used scientific and statistical functions, including the algebraic operating system.

But if you're into more advanced math, statistics or computer sciences, you should be looking at the TI-36 SLR, or the TI-37 Galaxy.

The TI-36 gives you a total of 89 functions. It can convert figures from one base to another and performs mixed calculations. It also has a 10 digit/2-exponent display that shows 13 mode or status

calculations. The TI-37 Galaxy has all this plus it can handle integer or fraction calculations. And it comes with a hard plastic carrying case.

So if you're looking for a calculator that's simple to operate and perfect for what you want it to do, think two letters, T.I. - and visit your Texas Instruments dealer.

What could be simpler?
