

The present publication forms the second part of Volume II., "Contributions to Canadian Palaeontology." It consists of a report by Dr. S. H. Scudder of Cambridge, Mass., upon the Coleoptera of the interglacial beds of the vicinity of Toronto, to which is added an appendix by Dr. A. P. Hopkins of Morgantown, W. Va., on Scolytid borings from the same deposits.

The Survey is greatly indebted to both of these gentlemen for their gratuitous work upon this contribution to the literature of fossil entomology.

GEORGE M. DAWSON.

GEOLOGICAL SURVEY OF CANADA,
OTTAWA, December, 1900.
