## BELLS!

FOR CHURCHES, ACADEMIES, FACTORIES, STEAMBOATS, ETC., made by the Subscribers, and a large assortment kept constantly on hand, mounted with their newly-improved Iron Yoke, which, by a detached plate, permits the Bell, without taking it from the Yoke, to be turned on its vertical axis any distance however small, or completely round, thus lessening the danger of a fracture from repeated blows of the Clapper in one place. This Yoke also combines the moveable arm by which the Bell may be raised or lowered in its bearing if desired, thus increasing or diminishing the force of the blow. The recent adaptation of Iron Cases, in which they would all sizes, increases their working facilities, and also enhances the quality of the casting; which improvements, with those of 30 years, during which the establishment has been in operation, have gained for their Bells an unequalled celebrity for volume of sound and quality of tone, and for which they have just received, January 1854, the FIRST PREMIUM at the World's Fair, many from this country and from Europe being in competition, and which is the nineteenth medal they have received. Being located at the junction of R. R., Canal, and River routes, they can ship in any direction at a moment's notice. For further information apply for circular.
