

1000 FEET above the Sea - Good Blood
THE CAN OF BLOOD.

THE CAN IS BOTTLED BLOOD THE ALIMENT OF THE BULLOCK.
The Universal Alimentary of Modern Medicine and Surgery,
and the TRUE "ANTITOXIN" of Healthy Nature.

In the more enlightened practice of Modern Medicine, "Blood-letting" has given place to Blood-giving.

Are you Get Good Blood—but Blew? Not by the Alimentary Process. It has already failed to do its work (else the patient would not be sick) and in some disease may not even be allowed to do the work it can stimulate as you will; the whole sum of the patient's alimentary power when fully forced into play, is unable to keep up the nourishing and supporting contents of the blood. There is absolutely but one thing to do; and, thank God, that can be done, usually with success, as ten-thousand-fold experience has proved. That one thing is this: where Nature fails to produce good and sufficient Blood, WE CAN INTRODUCE IT from the arteries of the sturdy bullock, by the medium of BOVINE BLOOD.

The vital activity of this living Blood conserve rests on Nature's instinct; it speaks for itself, to every properly equipped physician who will test its properties microscopically, physically, or therapeutically.

TRY IT IN PRACTICE.

TRY it in Anæmia, measuring the increase of red cells and haemoglobin in the blood as you proceed, together with the improving strength and functions of your patient.

TRY it in Thrombosis, with the same tests from week to week.

TRY it in Dyspepsia or Malnutrition of young or old, and watch the recuperation of the purised alimentary powers.

TRY it in Intestinal or gastric irritation, inflammation, or ulceration, that inhibits the cells, and witness the nourishing, supporting and healing work done entirely by absorption, without the slightest functional labor or irritation; even in the most delicate and critical conditions, such as Typhoid Fever and other dangerous gastro-intestinal diseases, Cholera, Intestinal Paroxysms, Diarrhea, Dysentery, etc.

TRY it per rectum, when the stomach is entirely unavailable or inadequate.

TRY it by subcutaneous injection when collapse calls for instantaneous blood supply—much better than blood-dilution!

TRY it on Chronic Ulceration, in connection with your antiseptic and stimulating treatment (which affords no nourishment) and preserves vitality and power of topical blood nutrition, abscissing pus, stench, and P.A.D., and healing with magical rapidity and finality.

TRY it in Chronic Catarrhal Diseases; spraying it on the diseased surfaces, with immediate addition of peroxide of hydrogen; wash off instantly the decomposed exudation, scabs and dead tissue with antiseptic solution (Thieth's), and then see how the tenacious membrane stripped open and clean will absorb nutrition, vitality and health from intermediate applications of pure surfaces.

TRY it on the Diphtheritic Membrane itself, by the same process: so keeping the pus clear and innocuous, washing away the poison, and re-establishing the strength independently of the impaired alimentary process and of eliminative stimulants.

TRY it on suppuration, except plethora or unreduceable inflammation; but first take time to regulate the secretions and functions.

TRY it on the patient tentatively at first, to see how much and how often, and in what medium, it will prove most acceptable—in water, milk, coffee, wine, grape, lemon or lime juice, broths, etc. A few cases may even have to begin by drops in crushed ice.

A New Hand-book of Haematology for 1895, summarizing the clinical experience of the previous year, from the extensive reports of Hospital and private practice. To be obtained in

THE BOVINE COMPANY, 6 W. Houston Street, New York.
