

The fact was put into evidence by the following experiment :

	Diagonal milking		Lateral milking	
Cow No. 1	31lbs	3.75 p.c.	30lbs	3.15 p.c.
Cow No. 2	31.5 lbs	2.57 p.c.	30.4lbs	2.40 p.c.

As a review, I will say that to have good cows in your future herd, good bulls from good strains of milking cows, must head your herd. In this manner your calves will become good producers if you train them by frequent, complete, diagonal milkings.
