

"Let Me Lick the Spoon, Mamma"

One of our customers, in speaking of the palatableness of PARKE'S EMULSION with WILD CHERRY, said her little girl always asked the above question. Moreover this same child was quite puny and sickly before taking the Emulsion, but now she is quite healthy and well.

We have no need to talk up the virtues of Cod Liver Oil as a nutritious medicine if only it can be prepared so as to be readily digested and easily assimilated. Our claim is that Parke's Emulsion is *not just as good* but just *so much better* than other kinds. There are three principal reasons for this claim :

1. The absolutely fresh condition of the oil and the prime quality used. We import the oil direct from the fisheries, in tin-lined barrels. It reaches us in the best condition.
2. We possess a patent electric Emulsifier (the only one in any retail store in the city), and are thus able to make our emulsion frequently and quickly. **WE NEVER HAVE STALE EMULSIONS.** We could not guarantee this of any other emulsion that we handle.
3. Because our Emulsion contains not only the Cod Liver Oil and the Hypophosphites, but also Extract of Wild Cherry Bark and Phosphoric Acid, both of which help in promoting the appetite and in aiding digestion.
