☾ The column of the moon's southing gives the time of high water at Painsboro', Cornwallis, Horton, Hantsport, Win Isor, Newport, Truro, &c.

The beginning of this month is the proper time to commence work in the garden. Let every border and flower-bed be dug and neatly raked. This month is peculiarly suitable for propagating by cuttings, and also for planting out *evergreens*, but shrubs of all kinds and herbaceous plants may be transplanted in all this month. Give Dahlias a gentle heat in the hot-bed, or bring them forward in pots or boxes in the house, to induce the breaking and shooting of the buds, each of which, cut off with a portion of the tuber, will become a plant. All plants or shrubs in pots should have fresh mould added to the surface; remove dead twigs and leaves, and give moderate waterings occasionally. Grafting may still be performed. If you would save your cucumber-vines and cabbage plants against the attacks of bugs and worms, go early in the morning, while the worms are sluggish, and dampness prevents the bugs from flying, and kill them all. It is easy to see in the morning, where a plant has been cut off by a worm the night before, and he will generally be found at that time in his burrow near the stump of the cut plant.
