A Strong, Stay-Tight Connection Where Other Mowers are Weak

Seventy years' experience,
plus a disposition to use the
very best materials when it
might seem more profitable
to cheapen things, is why
Frost & Wood Implements excel
from the "Quality" standpoint.

Take, for instance, the connection
between the Cutter Bar and Main
Frame of a Mower. Others use Small
Pins, that wear quickly, thereby
allowing connection to work loose,
and eventually "bang" the machine
into a blacksmith shop. We use
"large" Bearings for our "stay-tight"
connection (see illustration). They

fit accurately and there is no opportunity for
wear, because Cutter Bar has no chance to
work loose from Main Frame. No time lost
on the field—no bills to foot.

Another example of Frost & Wood "Quality"
is the Pitman Connection of Forged
Steel and "the Ball and socket Joint"—
strongest, firmest connection on the market.

Roller Bearings, with heavy boxes to
maintain them in perfect
position, make the No. 8
run easier than others.
Every connection is neat
and accurate. The "Internal
Gear" cuts out the
necessity of a "flying
start"—knives commence
cutting with first forward
step of horses.

The No. 8 Mower and
its companion, the Tiger
Rake, are on the top-most rung of the "Quality"
ladder.
