

MINARD'S LINIMENT CO., LTD

Gentlemen - Last winter I received great benefit from the use of MINARD'S LINIMENT in a severe attack of lumbago and I have frequently proved it to be very effective in case of inflammation.

Yours,  
W. A. HUTCHINSON.

For Sale or to Let

In order to close the estate of the late M. P. WOOD, Port Williams the farm formerly occupied by him containing 156 acres of land is offered for sale.

Said farm consists of 25 acres of dyke and and twenty five acres of orchard and the remainder in tillage land, this is one of the best stock farms in Kings County, and at this stage in our history, when mixed farming is so essential to success it offers to the right man a golden opportunity to make good. If not sold it can be rented with a view to purchasing. This farm is offered at a bargain. Apply to

C. A. CAMPBELL, Agent  
Port Williams

HORSE GOODS

Every description can be found here. There is not a thing missing what ought to be in it. Everything needed in stable, barn and harness room included. Every article has been gathered with great care, and you will not have a chance to complain about the quality.

W. M. REGAN, WOLFVILLE

EVERY-DAY DISHES IN HOLIDAY DRESS

By Martha Allen Gray  
The holiday season is upon us—the season when that contagion of serving "fancy dishes" was wide-spread. But this year plain dishes will be the "thing" and the extravagance of other years will be tabooed almost universally.

Serve the cream soups that we have so often with crostons and in this way use up some of the odds and ends of breads, or place a slice of toast sprinkled with grated cheese in the onion or meat soup, and a spoonful of popcorn in the cream of corn soup.

Disguise the simple meat stew with

crisp biscuits or serve as a pie with a crisp pie crust or a top of mashed potatoes for boiled rice. This not only makes the dish more tasty but gives additional food value to it.

Serve the dish of left-over chicken with dumplings either steamed or browned in the oven, or make a rich gravy by adding the bits of chicken, a chopped pepper or a bit of pickle and a hard-boiled egg, and pour it over tiny baking powder biscuits.

Try cutting apples in-half and roasting them with pork and see how they dress the dish when served. Likewise bananas, skinned and placed around the lamb roast will make a pretty dressing, and also add a delicious flavor.

Even the "impossible bread pudding" takes kindly to a layer of marshmallows, particularly if that same pudding be a chocolate one. Marshmallows also change the identity of our well-known friend, cornstarch pudding.

Plain buttered toast becomes a luscious sight when sprinkled with cinnamon and sugar and left to brown in the oven a bit. And incidentally, it makes a welcome dish for Sunday night supper.

Why not make plain desserts more tempting by sprinkling chopped nuts, marshino cherries, shredded coconut, or dots of jelly or by putting meringue on them?

In other words let us give our old garnishing stndbys, namely parsley, celery and eggs a rest and try something new on our families before they "get on to the trick."

SPECIAL VS. SIDE LINE POULTRY PRODUCTION.

At this time when economical production is of first consideration, the question of whether production should be increased by encouraging the number of poultry farms or by increasing the flocks on farms and in back-yards in the towns and cities, becomes of special interest.

Poultry Specialist

That the poultry specialist usually gets better results than the farmer, goes without saying. He gets better results because he has to; if he did not he would soon be out business. He has nothing but his poultry to depend on; he must show a profit. It costs him so much more to feed his poultry than it does the farmer that his only salvation is in increased production. He must get it or fall by the wayside—one of the failures in the poultry business.

With the present high and the ever ascending prices of feed, it is becoming more and more difficult for the specialist to show a satisfactory profit so that we must turn for increased production to sources mixed farm where a flock is kept as a side and in the town-dweller.

Farm Flocks.

Every farm in the country should carry a flock large enough to make the best use of the unsalable grains, vegetables and waste mill. There are few that could not to great advantage carry a flock of at least one hundred hens. But the flock must be put on a business basis. One member of the family—preferably one of the younger members—should be given full charge. Careful records should be kept and all wasters promptly disposed of. In this way the production may be greatly increased without any corresponding increase in cost.

Most of the work will be done by one of the younger members of the family. It will interfere very little with the general farm work. It will generally be necessary to purchase some feeds to supplement those available on the farm, but by so doing much of the lower grade products may be fed to produce a greater profit than if sold or fed to any other live stock.

The Back-yard Flock

The greatest hope for increased production at the present time lies in the back-yard flocks. There is no reason why every city, town and village should not be wholly or in great part at any rate, self-supporting from an egg standpoint. There are hundreds and thousands of dollars' worth of good feed thrown in the garbage pails every day. The waste going on even yet in our cities is simply appalling. The kitchen waste from the ordinary family of five or six people may be fed to best advantage to a flock of about twenty-five birds. This is more than many will want to keep, but a flock of this size will only require a house about twelve feet square—even a little less will do—no yard room is necessary and the

PROFITABLE SHEEP RAISING

THERE is not the least doubt that Western Canada is steadily building a reputation as a wool producing country. The opportunities it affords for the profitable breeding and rearing of sheep are unsurpassed in any part of the world. An abundance of suitable food of all kinds is available all over the country, while climatic and other conditions are exceedingly favorable. Almost any line of sheep husbandry may be followed successfully in the Prairie Provinces of Canada. On the range sheep breeding and rearing is an extremely profitable industry, especially in those districts where conditions are not well suited to ordinary agriculture.

That the farmer is more and more realizing the value of a small flock of sheep on his farm is shown by the increasing number of participants at the co-operative wool sales each year. Throughout the west this has been noticed at practically all the sales. In some cases, notably at Calgary, Alberta, there has been a greater number of participants and less wool offered than last year, but this is due to the fact that the larger breeders have been induced to sell their wool independently, so that practically all the wool offered for sale came from small farmers, who are obtaining as big returns in this line as in any other. At other places there has been an increase, both in the number of participants and in the quality of the wool offered.

It seems safe to say that within a few years the whole world will be looking to Western Canada and especially to Alberta for their sheep. The price now being obtained for far wool by those who use it as a by-product in the manufacture of felt hats is a very good one. It is being used in a large number of ways, and the demand is increasing. The price of raw wool is also high, and the demand is increasing. The price of raw wool is also high, and the demand is increasing.

eggs produced should keep the house supplied and still leave enough to sell to less thrifty neighbours to pay for all the supplement feeds which it is necessary to purchase.

What is more tempting to the appetite than an absolutely new laid egg from a flock that has been cleanly? Once used to home produced eggs, the consumer will never be content to depend on store eggs. If you don't believe this, try it.

Under present conditions, increased production should not be brought about by increasing the number of poultry farms, but rather by increasing the size and number of farm flocks, culling closely, and keeping nothing but good producers and last but of primary importance — by the increase in number of back-yard poultry plants where flocks may be kept largely on feed that would otherwise be wasted.

WANTED—a girl typewriter. One with considerable experience preferred. Apply at once at Advertiser Office.

Bean supper at New Minas Hall, Friday, Jan. 25th. Adults 35c. children 25c. 1a & ox

Mr. P. G. McNeil of Aylesford has been reported among the "Killed in action."

Dr. Howard Whidden President of Brandon College is one of the Unlucky members of Parliament. He is a brilliant graduate of Acadia.
