ments continually soaked with water.
The pot should be dry once in a while.

Bolled rice with tomatoes, peppers,
celery cut fine and added, then
whole flavored with butter and a
little grated cheese is delicious, baked.

Garnet Wheat

REGINA, Sask., Dec. 1 (C.P.)—Garnet wheat, the new discovery announced by L. H. Newman, dominion cerealist at Ottawa, which promises to revolutionize the wheat growing industry of Western Canada, has been evolved from "Saunders" crosses. Dr. Charles F. Saunders, former dominion cerealist, had thousands of wheat crosses when he left his work to Mr. Newman, and from these the new cerealist has announced that he has evolved a wheat which ripens from seven to twelve days earlier than Marquis. Dr. Saunders was the discoverer of the latter variety.

Mr. Newman is also experimenting with another new wheat called "Marquis," but it is not yet ready for distribution. If final tests prove successful a limited quantity of Garnet will be distributed to Western farmers next spring.

The parents of Garnet wheat were a high quality taken from the Riga district in Russia and Preston wheat, one of the Saunders wheats. Preston was at one time grown rather extensively in Western Canada as it is a very early wheat of high milling quality, but it is hard and shatters easily, and while still grown in a few districts, the yield is generally light. In the new wheat the good qualities of both parents appear to predominate. Red Riga, one of the parents of Marquis wheat, is now known to have come from the Riga district, so that Garnet comes from a select family tree.

The only blemish on Garnet's record so far as has been revealed is the colour of its flour, which is slightly yellowish, and the wheat exporting countries have constantly demanded flour that will make the whitest bread possible. It is probable, however, that some strain of Garnet may be discovered which does not have the objectionable shade of color.

Mr. Newman in an official report says: "Like its Preston parent, Garnet appears to be able to thrive under relatively dry conditions, better than do most other varieties of common wheat. It matures from a week to eleven or twelve days ahead of Marquis, depending on the locality and the nature of the season. In production Garnet ranks among the good yielders. Where early-maturing sorts are an advantage or where a certain type of drought prevails, this variety may excel even Marquis in yield. It is not expected, however, that Garnet will take the place of the latter variety, where this is well suited to prevailing conditions. Rather is Garnet likely to take the place of such early-maturing sorts as Ruby, which variety it usually out-yields by a fair margin. It may also prove a special value in some of the drier areas. Observations recorded to date indicate that Garnet is quite susceptible to stem rust. It may often escape a late epidemic of this pest by reason of its early-maturing qualities.

"In quality for bread making, this variety appears to rank among the better varieties. The question of quality will be investigated further during the winter months.

"Reward, is the result of a cross between Marquis and the very early-maturing variety of 'Prelude.' It matures as a rule from two to four days later than Garnet, although in some places the two varieties have matured practically on the same date. This variety is noted for its very strong straw and its fine appearing grain. It produces an excellent quality and color of flour. The grain is also remarkably uniform in size, a point of considerable importance to the seed grower.

"While by no means rust resistant, it nevertheless seems less susceptible to rust than Marquis."

Cure that cough—take Statford's Phorolone—sore throat.

Former Notorious
Outlaw

IS NOW GOSPEL MISSIONNER

Hamilton, Ont., Dec. 2.—Pavane Bill, notorious outlaw, pardoned "lifer" and widely known wild west showman, has seen the error of his ways and is now treading "the path of righteousness" as a member of a gospel mission in Hamilton, where he relates the story of his adventurous life to nightly gatherings. Gone are the days of outlawry when as a member of the Jesse James gang of killers he took part in the robbing of banks, trains and caravans and terrorized the borders of Texas and Mexico. Also gone are the days when he "spilled the blood" and killed audiences in Europe and America in wild west shows and received the plaudits of thousands.

Syd Chaplin at His Best
IN "THE MAN ON THE BOX"

"The Man on the Box," based on the Harold McGrath novel and play, produced by Warner Bros., and starring Syd Chaplin, at the Nickel Theatre, proved to be one of the most hilariously amusing pictures ever screened.

Syd Chaplin is even funnier than he was in "Charlie's Aunt"; first as a debonair young millionaire, then a typical car driver, a groom, a butler, and finally as a ladies' maid involved in a frantic tussle for a set of plans for an aeroplane invention.

In addition to directing the production, Charles "Chuck" Reisner plays the heavy, a Russian spy, Kathleen Calhoun is the pretty heroine, Alice Calhoun an inventor's wife and Helena Costello the hero's sister. The rest of a brilliant cast includes David Butler, Theodore Lorch, E. J. Ratcliffe, Charles Gerrard and Henry Borrowes.

The adaptation by Charles A. Logue and the scenario by Julien Josephson have not lost a single chuckle or laugh of the original story, and they have added a great lot of gags that get every laugh you've got. Without doubt "The Man on the Box" is one of the funniest comedies you'll ever see. You should not miss it.

Presentation
TO CAPT. E. McNEIL, O.B.E.

After the regular meeting of the Executive of the G.W.V.A., last evening, a presentation was made to Capt. Hector McNeil, O.B.E., who has resigned his position as Accountant of the Public Works Department, and goes to seek a position in New York.

Comrade Garland, Vice-President, was in the chair and conveyed to the meeting a message from the President, expressing his deep regrets at being unable to attend the meeting, being confined to his home through a severe cold. Comrade Garland extolled the brilliant work performed by Capt. McNeil in connection with the Association.

Speeches were also made by Comrades March, Byrne, Crocker, Mitchell, W. A. Grace and Patterson, after which the guest of the evening was presented with a cabin trunk.

A suitable reply was made reminiscent of the old days from Pleasantville in October, 1914, to Armistice Day, November, 1918.

"He's a jolly good fellow," and "Auld Lang Syne," closed the proceedings with a hearty handshake and bon voyage from his old comrades-in-arms.

McNeil leaves by the S.S. Rembrandt on Saturday.

Office Machinery

PROFESSOR DICKSEE ON THE
SAVING OF TIME.
LECTURE TO SECRETARIES.

Prof. L. R. Dicksee, M. Com., of the London School of Economics, in the course of a lecture to the Incorporated Secretaries' Association on "Office Machinery as an Aid to Secretarial Work," said that there was a very large volume of work connected with the duties of a secretary that could be done by machinery, and indeed there were wonderful possibilities in that direction. Secretarial work included correspondence, preparation of agenda and minutes, allotment of shares, payment of dividends, issue of notices of meetings, registration of transfers, calculation of interest, balancing of books, and even actual bookkeeping and sales ledgers. For practically all those purposes helpful machines existed. The only question was as to when they were helpful, and when the volume of work involved did not make it worth while to employ them.

As an example of the time which could be saved by the use of machinery for book-keeping entries, it was interesting to note that the Savings Department of the General Post Office, which dealt with entries of the simplest character seldom running into big figures, employed a machine which could make 700 entries an hour. It was calculated that a normal amount of such work for one clerk to do by hand was 10,000 entries a month, but that machine did 10,000 entries in about two days, thus effecting a substantial saving of time.

As an example of everyday matters which did not receive the attention they deserved, he mentioned that in an average office the upkeep of every inkwell cost about 3s. a year, the principal cause of expense being the evaporation of the ink. It was easily calculated that in most offices the cost of the upkeep of inkwells in one year would be more than sufficient to provide every clerk with a fountain pen. The principal feature about the use of machinery in offices was that, as compared with human labour, work could be done with greater accuracy and speed, as well as economy. Accuracy was the most important factor in any office; next came promptness, cost being distinctly third.

Unemployment Theory.

With regard to the human aspect of the matter, it was sometimes thought that the introduction of machinery led to unemployment because of the increased output which one operator was able to effect with a machine. Theoretically that was, no doubt, true, but in the long run it was certainly wholly untrue. What Adam Smith said 155 years ago had proved true ever since: "Where machines are in use we find upon the whole that the workers are in every way better off than they would be if they worked by hand." Increased output helped business all round. The immediate result might, at least in theory, be to throw a number of persons out of work because a smaller number could get through the same quantity of work with the aid of machines, but in practice it was not usually possible to change over from one system to another with such rapidity as to make matters worse out in that way. In practice what frequently happened was that work increased, and it was imperatively necessary to cope with the increased volume of work, which was sometimes hampered by the fact that it was impossible to extend the business premises. Moreover, the introduction of machinery was generally gradual, and there was no difficulty over the question of unemployment so long as the staff was not unteachable.

Another aspect of the question was that many persons thought that the tendency of the use of machinery was more and more to limit the work of an individual to a series of repetitions, which must become monotonous, but he could not see that repetition work by machinery was more monotonous than repetition work by hand. It was no more monotonous to operate a typewriter than to write with a pen. The question of monotonousness depended more upon internal feelings than upon external conditions. There were some people who were always bored by whatever they were doing, and there were others who found that anything they were doing was interesting.

On the whole, the question of the use of office machinery was one of increasing importance, and one which secretaries, above all people, would find it important to study.—Financial Times.

Liquor Laden Vessel Seized at Bay of Islands

SCH. MINNEGAN HAS VALUABLE CARGO.

NORTH SYDNEY, Dec. 2.—Word was received here this morning that the unfortunate sch. Minnegan, commanded and owned by George Herdige, of this town, was seized by the Customs authorities at Bay of Islands, Nfld., and was likely to be confiscated, her cargo in all consisting of upward of three thousand gallons of rum and considerable whiskey.

An infraction against the Customs regulations is the charge preferred against the schooner and her commander. Since coming off the coast early last Spring, the Minnegan had a hard row to hoe. The fleet of revenue cutters kept a watchful eye on her every movement, so much so indeed that this fall, or about a fortnight ago, she had upwards of three thousand gallons of rum on board, having no chance to get clear of it.

The Minnegan was a victim of the awful storms that prevailed on the coast, and was compelled to seek shelter in the safe harbour of North Sydney on different occasions, each time under great expense. At one time she was obliged to go on the slip to undergo extensive repairs, the storm dealing with her quite harshly. This was about the last time the schooner was in port. She no longer cleared for sea than the cutters Stumble-In and No. 2 followed close on her heels, and as there was no other craft out in the row, she was compelled to seek new pastures. Hence it was she was seized at Bay of Islands.

The law in Newfoundland is very strict in the case of vessels being seized for a violation of the Act. The Minnegan is of Newfoundland register, and therefore is not given the same privilege as a vessel of foreign register, particularly in the case of being laden with a liquor cargo, such as the Minnegan. Unless the latter vessel can show a clean sheet she will likely forfeit her cargo of three thousand gallons of rum and stock of whiskey taken on board at St. Pierre, in addition to her captain being fined one thousand dollars and perhaps confiscation of the vessel herself.

Girl's £17,000 Loss

"BEGGAR'S OPERA" PROFITS GONE IN FAILURES.

The story of how a young woman, little more than a schoolgirl, made £17,000 on the production of "The Beggar's Opera" at the Lyric Theatre, Hammersmith, W., and then lost it all, has come to light.

Miss Marian Wilson said that when 19 she helped to start the production, in the summer of 1910, with £200 given to her by her father. The sum was intended to help her on a career, and her father said that if she did not "make good" she would have to perform household duties at home.

"The production was a great success, running for nearly four years," Miss Wilson recalled. "In September, 1921, when I was 20, I was so enthusiastic over its success that I helped to start a season of British ballet at the Kingsway Theatre, W.C. It was a complete failure, and in that and other theatrical enterprises I lost nearly all the money that I was making on 'The Beggar's Opera.'"

Mail Bags

From the Skies

Experiments are being carried out in the hope of evolving some method by which mails can be safely dropped from aircraft flying at 5,000 or 6,000 feet.

At present the technical details of the devices that have been tested are being kept secret, but they are on the clockwork delayed-action principle.

"The intention is that air expresses shall be able to drop mail bags into 'falling boxes'—clear spaces of the countryside, reserved for the reception of mails—without slackening speed to descend to a low altitude.

A mail attendant on the machine will use a kind of bomb-dropping sight. The mail bags will fall earthwards like a stone, but when within about 50 feet of the ground, a parachute will automatically come into action, and the bags will land gently.

"Printing Isn't Expensive If You Pay Enough For It"

The task which business stationery has to perform is to convey a message. That is its primary purpose. But it has another. It should convey an atmosphere—a personality—which identifies the business it represents, and it should convey that atmosphere or personality so convincingly, so pleasingly, so substantially, that it makes the same kind of favourable impression that a good salesman or a fine office does.

Business stationery which fails in this particular is too expensive to use, because it is not doing the whole job. That's why printing isn't expensive if you pay enough for it.

We have lately installed an embossing machine which produces beautiful glossy or dull relief work on plain type printing that defies actual die or plate embossing in appearance.

A trial order will convince you of its excellence.

Diary in Cipher

Just a hundred years ago was published the world's most extraordinary work. It was by a great public figure named Peppys—pronounced "Peeps."

Half of each night he sat up writing, till he almost went blind—writing the queerest work that has ever occurred to man: "This was a Diary of the real truth about himself and everyone else, but written in cipher so that nobody could read it."

Peppys tells us how he bribed, and took bribes; how he got drunk, and was sorry next morning; how he once struck his wife and then kissed her and made it up.

Mixed with the bad there is a lot of good. We read how really fond he was of his wife, and how it troubled him to grieve her—when he had been found out! We read also how he set out to reform this and that scandal. For, thinking that his Diary could never be read, Peppys put down the truth.

That long after his death somebody read Peppys' Diary.

KEEF MINARD'S LINIMENT IN THE HOUSE.

Rich Find of
Gold Ore in B.C.

VANCOUVER, B.C., Dec. 4.—(Canadian Press)—Stories of enormous deposits of rich silver-gold ore in the big Missouri Mine, situated in the Salmon River section of the Portland Canal district, north of Prince Rupert, B.C., are confirmed by Pat Daly, who has been directing development at the property all summer. Daly is here on his way to report to his principals, the Standard Mines Corporation, at Tacoma, Washn.

"As a matter of fact," he said, "there is enough ore on the surface of the big Missouri, if it could be economically mined, to pay off Canada's national debt."

Twice this mine was under bond to Sir Donald Mann and associates, first in 1910 and again in 1918, but each time the bond was thrown up on the advice of geologists.
