Miss Elizabeth Phillips Hughes

England's Most Notable Woman Educator.

England's most notable woman educator, Miss Elizabeth Phillips Hughes, is now in San Francisco.

Miss Hughes is the head of this important college from 1885 until 1898, when her health, tried to the limit, again compelled consideration.

talked in Chicago. I asked how many were happy in their employment and found that was but one.

Without doubt the most important position to which Miss Hughes has been called is the one she still occupies on the University of Wales.

It was in Carmarthen, Wales, that Miss Hughes was born, and it is to her picturesque land and people that her life is ever turned.

That day, with all its primitive ceremonies, was a memorable one, said Miss Hughes, "of which I have never arranged, but the two birds searched diligently through the crowd for me, and when I was presented they told me that they had found me."

With the latter declaration Miss Hughes straightened up a bit, and said that she intended to look into that some day, and take her countrymen to account.

Miss Hughes' first teaching was done in the Ladies' College, which corresponds to Harvard for boys.

Back from Dawson.—E. A. Morris, who arrived in this city on Sunday evening, took a business trip to Dawson, reports that the city is being developed better shape than was the case a few months ago.

MINES AND MINING

By H. MORTIMER LAMB

On the 21 of July the Phoenix camp celebrated its tenth birthday. It was on that day in 1891 that the Knob Hill and the Old Ironsides were located by Matt Sylvester and Henry White.

The Wharf Coast Liners

Wharf Closes Closed When Umattilla Arrived but There Was No Trouble.

Longshoremen Worked the Cargo—Olympia Arrives From the Orient.

The steamer Umattilla, the long delayed liner of the Pacific Coast Steamship Company, which for five days was tied up at San Francisco by reason of the strike there, and now comes north with a non-union crew, arrived from the Golden Gate on Sunday evening.

The Arlington is worked through eight tunnels which are run in on the ledge, and the ore is then taken to the mill below the next one.

Whether it is the determination of the mining industry to address itself to the problem of successful home smelting or not, it is generally known that great demand has sprung up for high grade dry silver ore of which very little has ever been developed or mined in British Columbia and most attractive rates are being quoted by the smelters to the owners of this class of ore.

THE SILVER LEAD MINING The Spokesman Review publishes the following interview with J. Roderick Robertson, president of the B. C. Mining Association, in connection with the proposed silver lead refinery.

THE GRANBY SMELTER Mr. A. L. White, secretary of the Granby Consolidated Company, has been visiting the works at Grand Forks and following the Dominion press a graphic description he gave the correspondents of the Rossland Mining and Metallurgical Institute.

THE ST. EUGENE The following authentic statement about the position of the St. Eugene is given by the Dominion press.

THE GIANT MINE An attempt is being made in London by means of circulars issued by Mr. A. B. Dawson of 123 Cannon street, London to float the Giant mine at Rossland, B. C.

SMALL DIVIDENDS DECLARED The Rambler-Cariboo Silver Mining Company has declared a dividend of one cent per share on its capital of \$1,250,000.

WHERE THE PROFITS GO How unfair it is to judge British Columbia at the present stage of its development by the amount of money paid in dividends from the mines may be judged from the concluding part of the interview.
