L'olume, 2, Number 12. QUID VERUM ATQUE DECENS CURS ET ROGO. Thursday, December 11, 1834.

Servia thechinarion, 27th 21 29' 01" South

Do Ricker Ascession, 158 (20 15s Ac) N veirke Secric — 11h 53m 57s P. M Moss new, 304, 2n 7m — P. M

This group, and the one which follows, matter, for the most part of a slotely texture any education that in which numerous tragments of other facks the matter facts and stones are imbedded. We will said a slotely the matter facts and stones are imbedded. We will said a slotely the facts of the group below obstacts, impossible. We have strained may could have solvened the group below obstacts, impossible. We have strained may could have solvened the group below obstacts, impossible. We have solvened the group below obstacts, impossible. We have solvened the group below obstacts, impossible. We have solvened the group below obstacts in a discount of strained may have and second and second may a fact the group below obstacts in a discount of strained may have a solvened the fact that the fact the fact that the fact t whole, the Graduacke across consists tell a large stratefield also of strint economy and sharp process, intermingled with patches of times since, which trequently extend to coincide across the string led with patches of times since, which trequently extend to coincide across the since which trequently extend to coincide across the since which trequently extend to coincide across the since which trequently extend to coincide across which produced forederings and non-like distances. Residing since is not doffer grown at the grown at t group, it would seem to have been slowly de-the group above; but we are not to infer you-you should have tol time of this I loved posited. The origin of the limestones has from this that animal life was source. We my father as well as you could have him. You afforded matter for much special tron. We have said, that tolobites were probable the were the elder, and it may be, the favourne country, as we formerly did for the previous first creatures that inhabited the globe, but son; but I had a right in nature to have join harvet me racks, superes then to have re- this is only interred from their being the low- ed you in ordering this need stone, and I not suited from the existee of morine animals, est specimer spof organic life butherto found. During these words, the stone was sinking because we would be thus called upon to There may have existed previous to them my into the earth, and many persons who wer consider that carbon de of line was once riads of fleshy and gelatinous animals which on their was from the grave, returned. For more abundantly present in the sea than we perished without one soldary trace tehind a while the cider brother said nothing, for now find it, and that it has been gradually that shey had ever lived, and moved, and had be had a conscious ness in his heart that he usells lead us to expect that the see, having Turner has suggested, that, if we suppose signing this last becoming mark of affection been deprived of a sounderable portion of its these animals to have been abundant at an anid respect to his name it; so the since was carbonate of lime, the rocks composed of it early period, we may thus account for the bi-yould become less and less abundant as we incrinous nature of some of the earlier lime. more from the older to the more modern for-stones, especially those which do not contain tarious memorials of the hundle dead. Thillions. But this is the very reverse of the a trace of organic remains.

The inscription merely gave the naease : it has been supposed that the carbonate of home has been derived from the in eri.

or of the earth ; and as it is not unfrequent direction of the beds; and although the cal-

unimal exusis is to be found have been the first living creatures who in habited our earth. Their forms vary consisterably; and in some which we have examined, the head and mouth extended over the whole dian eter of the body. They seem now to have entirely disappeared from among existing animals. Several tembles, such as the state of the mark is, the promise of the season, or change of temperature of manner and to the first below to down his head and weighter unconnected with precise of the season, or change of temperature of manner and the promise of the season, or change of temperature of manner and the promise of the season, or change of temperature of manner and the promise of the season, or change of temperature of manner and the mark is given, while a murmor of satisfaction arose the promise of the season, or change of temperature of manner and the mark is given, while a murmor of satisfaction arose in the promise of the season, or change of temperature of manner and the mark is given, while a murmor of satisfaction arose in the promise of the season, or change of temperature of manner and the mark is given, while a murmor of satisfaction arose in the first below of the mark is given, while a murmor of satisfaction arose in the first below of the mark is given, while a murmor of satisfaction arose in the first below of the mark is given, while a murmor of satisfaction arose in the first below of the mark is given, while a murmor of satisfaction arose in the first below of the mark is given, while a murmor of satisfaction arose in the first below of the mark is given, while a murmor of satisfaction arose in the first below of the mark is given, while a murmor of satisfaction arose in the first below of the mark is given, while a murmor of satisfaction arose in the first below of the mark is given, while a murmor of satisfaction arose in the first below of the mark is given, while a murmor of satisfaction arose in the first below of the mark is given, while a murmor of satisfaction arose in the first below of the mark is given, while a perition of this series of rocks, as they occur in after formations; but in these they must have been finally entombed, since no living trace of the spire and gray walls of the diouse of the blow that by between the grave of their food, trace of them is now to be found; others a

preserved in the preceding series of rocks -Indeed, the formation of several coal mines has been referred to this epoch-an imporneously, or hearly so, with the dawn of aniexisted at this period besides fish, and the had been nutered within a tow days p st, dur- were not beside the old uses when he ce other organized beings already mentioned, it in the necessary preparations for the old As long as seose continued with him ten is impossible to say; but there is no presump were not wanting, for this is only in accord-
