

*Leucophasia* is a modification of *Euchloë*, but owing to the atrophy of the cell which occupies only a small portion of the basal area of the wing, 10 and 11, as well as 7, 9 and 8a, all rise from 8.

I should be exceedingly obliged if any one who has a good collection of the N. American *Pieridæ* would tell me which of the *Pieridi* and *Anthocharidi* have neuration of these types.

I do not wish in any way to suggest disagreement with Mr. Cockerell's views, which may or may not be correct, but at the same time I do wish to show that the superficial larval resemblance is unreliable; and I wish also to obtain some information as to which of the American *Pieridi* and *Anthocharidi* agree generically with our British *Euchloë* and *Pieris*.
