"Continuous Coal Cutters"

The Sullivan Room and Pillar Chain Machine has an efficiency of 200 per cent. in excess of the breast machine, owing to the following facts:

- (1) Machine cuts across entire face in one operation, without moving jacks or barring machine by hand
- (2) Occupies one-half as much space in front of coal. It is not necessary to move props when using this machine. (Props shown in cut are 6 feet from face of coal.)
- (3) Machine cuts high kerf, cuts on the bottom, and leaves no coal to be lifted nor sprags or ribs at rear of cut to hinder blasting.
- (4) May be used for drawing pillars
- (5) Uses from 20 to 30 per cent. less power per ton of Coal cut
