

intention from end to end. Gradually power came back into the limb and the woman got perfectly well. She sat up in the hospital and got an attack of grippe, followed by trouble in the middle ear. From this she recovered. Examination of the tumor by Dr. Anderson and pronounced a lipoma. An interesting feature of the case was the manner in which the tumor was hugged by the sciatic nerve.

Dr. A. A. Small, enlarging on the case of duodenal ulcer, said the patient, a very healthy looking young girl of seventeen years, came to him complaining of nausea and only nausea, for which he prescribed a mild stomachic. He was called to see her early the following morning, when he found her complaining of very severe abdominal pain, which pain was confined to the right inguinal region. She was sent at once to the hospital; and as it was thought that it might be coprostasis a high enema was given, with very slight result. Suction was then advised, and the results found as given by Dr. Grassett.

Dr. George A. Bingham spoke in reference to the lipomatous mass. There is danger in connection with these tumors, and mentioned a case of a woman of sixty years who had for twenty years a small mass situated over the anterior aural nerve. Ulceration occurred from irritation of underclothing, and there was general breaking down of the whole mass. The temperature rose to 101 or 102, and there was a slight cardiac murmur also prior to operation. The growth was removed, and for some time after the operation this cardiac murmur persisted. It was probably due to septic endocarditis as a result of absorption, owing to broken down tissue from a simple fatty tumor. This gradually got well and the patient left the hospital recovered.

Dr. Ross referred to a case of duodenal ulcer occurring in his practice. Patient was taken suddenly with pain, with severe hemorrhage from the stomach and died. *Post mortem* showed old duodenal ulcer which had suddenly perforated into a vessel, resulting in death. Also spoke of a case in consultation, a man who for years had very severe hemorrhage from the intestine at long intervals. This case was jocularly referred to as "onionitis," from pieces of green onion being found in peritoneal cavity when operated on. From this the man made a good recovery, but some months after came back to the hospital. He died, and on *post mortem* found old ulcer.

Operation for Deformities—With Photographs.

Dr. George A. Bingham presented photographs and recited the history of this case. A cripple, a young lad of fourteen years, although he looked seventeen, came to the Children's Hospital, having heard of the wonderful surgical operations
