

INTRODUCTION.

Among the many remedies which men of science, learning and experience have recommended to the suffering patient to relieve, investigate and cure, perhaps none have ever been tried or recommended with equal security, efficiency and success as *MIXERAL WATER*.

Among those *Waters* now in use, none are so much in demand as the *MIXERAL WATER*. It is at once a refreshing drink to robust and healthy, a cooling draught to the feverish patient, and it has been used as an effective cure for many disorders which arise from the impure state of the blood and otherwise.

The increasing demand for this *Mixeral Water* has induced the proprietor to make arrangements for its introduction into the principal Cities of Canada and the United States, confident that when it is once known, it will obtain for itself a more extensive circulation and be more highly appreciated.
