

roots. Hot water will be found extremely beneficial in raddish and other vegetable beds. Scald the earth before sowing the seeds, by which means you will destroy the larvæ of the insects which are apt to be very plenty in a rich soil.

Useful Cement.—A useful cement, for general purposes, is composed of two parts of rosin, melted over a slow fire, into which one part of the quantity of Plaster of Paris is to be introduced, and well mixed by stirring them; and two parts of shell lac, and the whole being in a fluid state, constitutes a firm and durable cement.

To remove the musty flavor from wheat which has been damaged.—An English receipt book directs as follows:—For every bushel of wheat take two pounds of potash, dissolve it in water with about double the quantity of wheat. Let the wheat be thoroughly washed in the solution, rinsed with pure water, and dried quickly.

In a letter to the Right Honourable Sir Joseph Banks, it is observed, 'if wheat be musty, it must be put into any convenient vessel, capable of containing at least three times the quantity, and the vessel must be subsequently filled with boiling water; the grain should then be occasionally stirred, and the hollow and decayed grains, (which will float) may be removed.—When the water has become cold, or in general, when about half an hour is elapsed, it is to be drawn off. It will be proper then to rinse the corn with cold water, in order to remove any portion of the water which had taken up the must; after which the corn being completely drained, it is without loss of time, to be thinly spread on the floor of a kiln, and thoroughly dried, care being taken to stir and turn it frequently, during this part of the process."

Cockroaches.—A respectable professional gentleman informed us yesterday, that he has recently discovered that the spirits of turpentine is an effectual remedy against the depredations of cockroaches. He recommended to put a little of it upon the shelves or sides of your book-cases, bureaux, armoires, or other furniture, in which they take shelter, which may readily be done with a feather, and these troublesome insects will soon quit, not only the furniture, but the room. The remedy is simple, and easily obtained by every person that wishes it. It is not unpleasant to the smell, soon evaporates, and does no injury to furniture or clothing. This is a valuable discovery, if it proves in all cases as effectual as our informant assured us it did in his own house.

Poisoned Sheep.—A correspondent of the N. E. Farmer, says the best remedy for a poisoned sheep is to give it a small lump

of butter or a qu either is to produ poison and effects while the animal h
