SPECULATION AS TO PRICE OF WHEAT

(Toronto Globe.)

Considering the state which Canada has placed on the wheat crop this year, any light that can be thrown upon the world market for wheat and the probable price of it is of importance to the community generally. As the days pass and the western crop moves further towards safety, there is increasing confidence, and interest centres in the probable market conditions. Last year the United States exported 360,000,000 bushels of wheat and imported 60,000,000, leaving net exports of 300,000,000. It is expected that this year's exportable surplus will be 200,000,000 bushels, and a similar surplus may be available from Canada.

A year ago Broomhall estimated that the countries importing wheat would require 572,000,000 bushels for the year ending August 1, and all but 4,000,000 bushels of that amount had been shipped by July 1. Drought has caused serious damage to European crops this year, and while it is claimed that wheat in Great Britain and France is not greatly injured, other food crops have suffered, and that should mean a greater demand for wheat. Therefore the importing countries will depend mainly on Canada and the United States in North America and upon Argentina and Australia in the southern hemisphere.

The two last named countries do not harvest until January, so that predictions as to their crops are premature. Second harvest, however, has been favorable, but it is yet uncertain whether the return from those two countries will be large enough to depress prices later on. Since trading in wheat for December delivery opened at Winnipeg a week ago, there has been little change, with the price now around 81.45. There may be many changes in the price in the next few months, but there is a considerable body of opinion anticipating a return of around 81.50. It is expected that marketing of this year's wheat will be carried out more speedily than usual, and that the market will be more liquid. The view that the agitation for a wheat pool had a prejudicial view of the situation in prices and the risks that would be involved.

WILL FURS ADVANCE?

(Toronto Globe.)

Fur buyers who have been in Northern Ontario and other parts of Canada to make purchases for local firms for the coming season stated yesterday that the market had been cleaned up by buyers from the United States and that trappers are holding what supplies they possess for the higher prices to be had from United States buyers. Even the supplies of wolf skins, which were quite heavy in Winnipeg and Edmonton until recently, have been purchased by United States firms.

It is possible that United States buyers made heavy purchases in Canada in anticipation of a duty being imposed on hides and undressed skins. In any event the shortage of furs in Canada, local merchants declared yesterday, would mean a rise in the price of furs this season. They declared it was quite difficult to secure from local wholesale houses at prices approaching those of last season, beaver, muskrat, Hudson Bay seal, foxes of any kind, grey squirrel and opossum.

STORING EGGS.

Eggs when newly laid are fairly free from bacterial infection, but when improperly handled may become badly infected. Bacteria penetrate the shells through the pores and enter the egg contents. Dirty and damp nests are a prolific source of infection. Then if eggs are kept in a damp room bacterial infection is liable to result, as shown by moulds on the inside of the shells. The keeping of quail eggs is determined more by the kinds of bacteria present rather than the number.

MORNING NEWS OVER THE WIRES

A woman identified as Sara Cowan, said to be the daughter of Hon. J. K. Cowan, was found dead yesterday in the Maryland Hotel in New York. Death was due to alcoholism and drug poisoning. In 1920 Miss Cowan eloped with Charles Monson of New Haven, and ten years later she obtained a divorce in Seattle.

OCEAN TONNAGE.

The tonnage of seagoing merchant vessels launched during the three years ending December 31, 1920, comprised more than 25 per cent. of all similar tonnage launched in the twenty-nine years beginning with 1892, for which the compilations of Lloyd's Register of Shipping are available.

Prior to the European War, the largest amount of shipping launched in any year was 3,332,882 gross tons, in 1913. Ship construction decreased during the earlier phases of the war, falling to 1,501,630 tons in 1915. In the following years, however, urgent demand for tonnage stimulated construction, but it was not until 1918 that total launchings exceeded those of 1913. In that year, thanks very largely to the construction of more than 3,000,000 tons in the United States, the world's shipyards launched 5,147,450, of which more than 4,000,000 were the product of American yards. In 1920 the tonnage launched was 3,332,882 gross tons or seagoing merchant vessels between August 1, 1918, and November 11, 1918, and the loss through marine hazards of an additional 2,200,000 tons in the same period, the world's mercantile tonnage is today greater than it would be had the average rate of increase for the years since that date. Estimates of tonnage now ahead indicate a total in excess of 60,000,000 gross tons, approximately 11,000,000 gross tons above the figure for June 30, 1914.

HEATED CONTROVERSY.

Bathing Without Bathing Suits Urged in Berlin.

Berlin, Aug. 2.—A heated controversy has broken out between the Catholic and the Democratic Vorwarts over the question of nude bathing. One Dr. Leopold P. has suddenly emerged from local obscurity by advocating that boys and girls like-wise youths and maidens, should seek out bathing places and "bathe" without bathing suits. This suggestion has aroused Germany to a state of revolutionary times. The immoral tendencies of revolutionary times.

RATS AND THE PLAGUE

Rat extermination and resulting removal of danger from bubonic plague is being pushed by the U. S. Public Health Service. Portland, Maine, and Baltimore.

Canadian National Railways.

(EASTERN LINES) TENDERS FOR TIES.

SEALED TENDERS addressed to the undersigned and endorsed "Tender for Ties" will be received at this office until twelve o'clock noon, Saturday, 17th day of September, 1921, for 1,000,000 Railway ties to be manufactured between October 1921, and May, 1922, and delivered between December 1st, 1921, and September 30th, 1922, on Canadian National lines between Quebec and Sydney, including Halifax & South Western, in accordance with the Specification No. 8856, dated March 18th, 1919.

In the form and Specifications can be obtained at the office of the General Agent, Room 251, New Union Station, Toronto, J. C. Stewart, Tie Agent, Moncton, or J. Bain, Superintendent, Bridgeville, N. S.

Tenders will not be considered unless made on forms supplied by the Railway. No tender for quantities less than 10,000 ties will be considered.

The lowest or any tender not necessarily accepted.

Special arrangements will be made to purchase ties fully up to specification, manufactured and delivered by actual settlers from their own lands.

W. H. GRANT, General Tie Agent, Canadian National Railways, Toronto, Ont.

Toronto, July 29th, 1921.

This Protection Can't Go Wrong

Dear John:

After the creditors would be left to your loved ones from your business, in case of your death?

Very often it is little or nothing.

Creditors cannot claim insurance money payable to me. So will you not please secure a policy AT ONCE?

Your loving wife.

Write for pamphlet describing our Protection and Savings Policy.

EXCELSIOR LIFE INSURANCE COMPANY

T. R. S. SMITH, Provincial Manager, St. John, N. B.

Id., among other cities, have made appropriations for the work, in which the Public Health Service will co-operate.

The extreme difficulty of eradicating the plague, which is essentially a rat, and not a human disease, when once it gets a foothold, makes rat-proofing of houses of the very greatest importance. It is especially true in sea-coast cities, where even the very greatest precautions can not always prevent rats from getting ashore from vessels coming from ports where the plague is epidemic.

HIGH MOVIE SALARIES

THINGS OF THE PAST

Brady Says 90 Per Cent. of Theatrical Profession Walking the Streets.

Washington, Aug. 2.—Hearings on tax legislation were ended by the House Ways and Means Committee after representatives of the motion picture, fur and other industries had appeared to urge the repeal of the special taxes applying to them.

Representatives of the motion picture industry declared that business depression had hit the amusement business hard. William A. Brady, Saul Rogers and others urged the repeal of the film tax, the seat tax applying to theatres, and the admission tax.

"Ninety per cent. of the actors of the country now are walking the streets," said Mr. Brady. "Only one movie producer was able to pay a dividend last year. High salaries have disappeared."

"The day of the Pickford and Chaplin salaries has passed. The depression and the high taxes have hit hardest the smaller theatres in the little towns, because the people are refusing to accept the cheap, one-reel films."

Mr. Rogers said that 4,000 moving-picture houses throughout the country had closed their doors.

WOULD FIX CALORIES FOR FULL DINNER PAID

State College, Pa., Aug. 2.—Determination of the number of calories and vitamins a stenographer's lunch should contain, with what the hungry laborer's dinner pail should be filled, and similar problems, would be made by a \$100,000 a year investigational body, if plans outlined here proposing a national institute of nutrition are carried out. The body would be composed of the combined research ability of the nation's most eminent scientists.

RAILWAY FIGHT IN MEXICO OVER WAGES.

Mexico City, Aug. 2.—Definite action by the Mexican railwaymen on a general walkout scheduled for yesterday was deferred to await reports on the strike vote in outlying districts. It will probably be three days before the results will be known.

Government officials today reiterated their determination to enforce the wage reduction which provoked the strike threat, and various railway unions have announced that they will attempt to tie up all government operated lines if the reduction is made.

Dr. Armstrong, who is a member of the council, pointed out that, while food requirements for different classes of population have been investigated for years, along with economy in the use of food-

stuffs, there never has been a nationally concrete movement. The council, he said, considers solution of these questions of paramount importance, not only for every-day use, but for war and disaster emergency.

The problem of making the greatest saving in otherwise wasted energy in feeding animals materials that humans cannot consume is of equal importance, he added. It is hoped to get the work started in the near future, he declared.

Dr. Henry Prentiss Armbryst, a nutrition specialist and director of the State College Institute of Animal Nutrition, gave the first intimation of what the National Research Council and its Committee on Food and Nutrition wish to do to a delegation of farm implement dealers visiting the State College School of Agriculture.
