### Questions and Answers. Miscellaneous.

#### Suckers as Scions.

Last spring, in grafting Kings on Duchess of Oidenburg stock, I used suckers for scions. They all grew well, but I am advised by some parties who profess to know, that a graft grown from a sucker will never produce fruit.

W. R. P.

Ans.—Suckers do not have the same propensities to produce fruit quickly after being set that is inherent in the wood on the tips of the branches, but they bear fruit, nevertheless.

#### Kneesprung - Buckwheat.

1. I have a road colt rising two years which I intend to train in next fall that is weak at the knees. Please advise me as to what I should do. I have been feeding him off the floor. Are the kneesprung cures that are advertised any good? In case of blistering him, where would you apply the blister, the front or back of knee?

2. What would be the best kind of buckwheat to sow on clay loam?

3. Give the addresses of some girl homes.

L. B.

Ans.—1. Theoretically, the blistering of the extensor muscles and tendons should give good results. In most cases it is the flexor or back tendons that are blistered, and if this has any result at all it increases the trouble. Kneesprung is due to too strong or too short flexor (back) tendons, or to too long or too weak extensor or front tendons. The flexor being stronger than the extensor, keeps the limb in a partially flexed position. Blistering stimulates muscular contraction, but has slight effect upon tendons. Hence, it should be the exterior muscles (the front muscles above the knee) that should be blistered. The slight contracting action of blisters upon tendons explains the absence of noticeable evil effects when the flexors are blistered for kneesprung.

2. Rye buckwheat has yielded highest returns at the O. A. C. Japanese or Silver Hull would likely do all right, also.

3. Write the Secretary of the Children's Aid Society at Ottawa, Kingston, Belleville, Toronto, or London.
