

You Require No Fertilizer To Yield Bumper Crops

A man will spend an hour digging a tree hole that dynamite will excavate in an instant. The spaded hole will be hard all the way down, making it difficult for transplanted roots to take hold. This is one of the chief reasons why transplanted trees so often die.

The accompanying cuts illustrate the wonderful difference in growth in dynamited and hand-dug holes.

Stumping Dynamite

used on a farm eliminates the costly process of fertilizing each year. It makes the land porous to absorb plenty of water in rainy weather, and this water, which is the

source of the vehicle of plant food, is drawn to the top by the roots of the plant as needed for its growth.

A whole row of tree holes can be excavated in one instant when charged with "Stumping Dynamite" electrically exploded. On every farm there are many ways in which the use of **Stumping Dynamite** will save time and money and increase profits; Removing Stumps, Boulders, etc. Breaking up hard pan subsoils; Draining Swamps, Ditching, Digging Wells or Reservoirs, etc., and many others.

FREE ILLUSTRATED BOOKLET

enumerating the many advantages and the cost of dynamiting on the farm will be sent you on request.
