

The true value of a food can only be measured by its assimilability. There is a great difference between the mere ingestion of food and its assimilation by the living cells.

---

---

# LACTO-GLOBULIN

---

---

which is more readily assimilated than absolutely any other alimentary product, owes its remarkable qualities to the action of the Enzymes which complement its nutritive value.

---

The intelligent use of "LACTO-GLOBULIN" gives definite results, as an adjuvant in the treatment of constitutional and functional disturbances.
