TERRA COTTA LUMBER

Porous Terra Cotta Building Material FOR FIREPROOF BUILDING PURPOSES.

IT is not excelled by any other material and does not crack or fall to pieces on the application of cold water when red hot. It is also proof against damp, rust, and vermin, and can be sawn, nailed and worked with carpenters' tools. Mortar adheres to it without either furring or lathing, and makes the house built of it cooler in summer and warmer in winter, and weighs less than half what brick does. It is much better in every way than either wood or brick for inside walls, partitions, floors, ceilings, furring and roofs, and on the average cheaper than either. It has the recommendation of architects and is certain to reduce the cost of fire insurance.

Further information will be cheerfully given to parties repairing, building or intending to build.

MONTREAL TERRA COTTA LUMBER CO., LIMITED.
MONTREAL, - QUEBEC.

MAGUIRE'S Ventilating Self-Flushing and Self-Cleaning Trap.

Robert Carroll,
66 Adelaide St. West,
TELEPHONE No. 704.

Sewer Pipe,
Chimney Tops,
Fire Brick,
Fire Clay,

PORTLAND
—AND—
THOROLD CEMENTS
always on hand.

Maguire's Trap is particularly adapted for house drainage and overhead sewer ventilation. The only reliable self-cleaning Trap in the market. Owing to the fact that the outlet C is below the inlet A and formed as shown, any liquid or solid matter entering the Trap B must, when it once reaches the top of seal D, flow over and fall clear into the outlet C, not only increasing the velocity of the flow of the water and solid matter through the Trap B by creating a fall from the said Trap, but it is also so shaped that it effectually prevents any backwash through the outlet C into the trap B.

RADIGAN'S PATENT METALLIC LATH.

THE object of this invention is to form circular corners on stud partitions, both outside and inside, when required, or only on the outside. This has hitherto been done by making the grounds with coopers' laths, which, owing to shrinkage, caused the plaster to crack—but curves of any required radius may be made with these Metallic Laths, and which will form a strong and firm ground in line with the wooden lathing for plastering on, and as shown in cut A, the laths are keyed top and bottom, thus forming a double key.

The attention of Architects and Plasterers is called to this invention.

Give them a trial and be convinced. Send for Circulars and Price List.
