

SYENITE-GNEISS (LEOPARD ROCK) FROM THE APATITE
REGION OF OTTAWA COUNTY, CANADA*

BY C. H. GORDON

(Presented before the Society August 23, 1895)

CONTENTS

| | Page |
|---|------|
| Introduction..... | 96 |
| General description of the region..... | 96 |
| Geology of the region..... | 96 |
| Character and classification of the rocks..... | 96 |
| Lithological characters..... | 98 |
| High Rock district..... | 98 |
| General description..... | 98 |
| Geological structure..... | 99 |
| Subdivisions of the syenite-gneiss..... | 99 |
| Geological occurrence of the rock..... | 100 |
| Megascopical characters..... | 103 |
| Coarse syenite-gneiss..... | 103 |
| Ellipsoidal syenite-gneiss..... | 105 |
| Streaked syenite-gneiss..... | 106 |
| Microscopical description..... | 107 |
| Coarse syenite-gneiss..... | 107 |
| Ellipsoidal syenite-gneiss or leopard rock..... | 114 |
| Streaked syenite-gneiss..... | 117 |
| Character and relations of the rocks..... | 119 |
| Nomenclature..... | 120 |
| Origin of the ellipsoidal structure..... | 123 |
| General hypotheses..... | 123 |
| Primary origin..... | 124 |
| Differentiation of the coarse syenite..... | 124 |
| Differentiation of the ellipsoidal rock..... | 125 |

*Condensation of thesis presented for degree of Doctor of Philosophy, University of Chicago, June 13, 1895.

The author is indebted to Dr A. R. C. Selwyn and his associates on the Canadian Geological Survey and to Mr A. P. Twidale, superintendent of the High Rock phosphate mine, for numerous courtesies and favors. The analyses were made by Professor William Hoskins, of the Chicago Academy of Sciences. Especial acknowledgments are made to Professor J. P. Iddings for his keen, critical analysis and painstaking assistance. Without his aid the paper would lack much of any value it may possess.
