30	Frid	Spooner, who weighed 569lbs died 1775	5	0	7	0	3	5 8	☾	12

The mercantile shipping of the civilized world amounts to about 8,000,000 tons, which is worth, new and old, thirty dollars per ton, and nets, clear of interest, insurance, &c., ten per cent, or twenty-four million dollars per annum. The appropriation to the British Navy for the current year, is thirty-three million, six hundred and twenty thousand, two hundred dollars ! Is not this a sober fact, that the annual expense of one nation's navy exceeds the net profit of all the mercantile shipping owned by the civilized world ?

The war debts of the European nations amount to ten thousand million dollars, (ten billions). It would require the labour of four millions of men, at one hundred and fifty dollars per annum for each man, to pay the interest of this sum at six per cent. To pay the principal, it would be necessary to levy a tax of at least ten dollars on every inhabitant of the globe !
