GREAT TEMPERANCE MEETING IN LONDON, G. B.

Temperance work in Great Britain enters a new phase with the representative gatherng at the Westminste Central Hall on May 12. For nine months the President of the Wesleyan Methodist Church (Rev. J. A. Sharp) and the denominational temperance secretaries (Revs. H, Carter and E. Benson Perkins) have conducted a vigorous campaign within the denomination, remarkable response to their appeals has suggested the widening of the cam-paign to include all the Churches. ntitle Johnny has become a strong sturdy boy."

One mother writes:—"If you had seen my little Johnny four months ago and you were to see him to-day, you would never believe that he is the same boy. Then he weighed only 49 pounds. To-day he weighs 90 pounds, almost double what he weighed four months ago. His trouble first started with a cold, which we never noticed because he was strong and like all boys of his age occasionally canght cold. After a while we began to notice that his cough, instead of getting better, was getting worse, that he was looking pale and losing weight. He seemed to be tired all the time, had no energy to do anything. Before he caught this cold he had no trouble with his lessons and remained at the head of his class without much study. But we began to notice a change. He didn't seem to care whether he knew his lessons or not and nothing seemed to interest him. He coughed so much and so hard at times that his face would become purpleand we thought he would surely burst a blood vessel. Medicines and cough mixtures didn't do him any good. Finally, in desperation and as a last resort, we tried Carnol. In a short time his cough had almost disappeared. His ap-bettle was returning and he was beginning to take an interest in his studies. And, thanks to Carnol, he has become as strong and healthy as he has ever been."

Every year there are numerous re quests from growers, asking why the tips of their young canes are wilting. Upon close examination it will be seen that the cane has been girdled at the point and when this wilting is first noticeable s the time to institute control. Cut well below the wilted portion and destroy the cut portion. If these are not removed the young larvae, hatching from the eggs laid in the girdle, will work down the ane and practically destroy it.

As soon as the fruiting season is over emove the old canes by cutting them off close to the ground, and destroy them. This gives the new canes a better chance and assists in insect and pest control. M. B. Davis, Pomologist. Central Experimental Farm, Ottawa.
