LACTO-GLOBULIN

AS AN ADJUVANT DIET IN

Tuberculosis

stimulates the appetite and assures an ample supply of pure concentrated milk albumen, to counterbalance the rapid tissue waste, and sustain the nutrition and strength. Easily digested and completely assimilated, without distressing in the least the most delicate stomach.

The Enzymes increase the disease-resisting power of the blood; materially aid in the general digestion, and in producing the desired physiological condition.

The high percentage of phosphates acts as a valuable tonic to the system.

The following is an interesting case report by Dr. M----, Montreal:

C. R. male æt. 35. The patient has been suffering from pulmonary tuberculosis for four years. Had a relapse three months ago.

Patient was pale and poorly nourished. Had gradually lost weight, strength and appetite. Had night sweats and loss of sleep due to cough. Cough was especially severe in the morning. Auscultation.

Right Lung
