

Strychnine is the drug most commonly used to sustain the heart, and many advise that it be given in full doses hypodermically because the stomach is often so disturbed as to delay its absorption.—*Journal of Medicine and Science*, August, 1901.

FISSURE OF THE NIPPLE has been very successfully treated by many physicians with orthoform. A few drops of a saturated solution of orthoform in 80 per cent. alcohol is applied directly to the crack, and a dry compress is then placed above.

SULHUR CREAM FOR DANDRUFF.

Dr. Geo. T. Jackson says the following will make an elegant sulphur ointment, which he uses extensively in the treatment of dandruff:—

R White wax.....	3 iiiiiss.
Ol. petrolati.....	5 iiss.
Rose water.....	5 j.
Sod. baborate.....	gr. xv.
Precipitated sulphur.....	3 iiiiiss.

This is an elegant, smooth, white preparation without sulphur odour. It keeps perfectly, does not separate, and is as perfect an ointment as can be. Dr. Jackson has tried on his scalp all sorts of lotions in the treatment of seborrheal dermatitis, and invariably comes back to the sulphur cream with pleasure and profit. Used once or twice a week, it keeps the scalp comfortable, does not make the hair too greasy, when properly applied, and checks the dandruff.—*Four. Cut. and Gen. Ur. Dis.*

FOR TOOTHACHE.

Under the name of Swedish toothache drops, the Ohio Dental Journal quotes the following:—

R Clove-oil.
Cajuput-oil, of each, 10 parts.
Chloroform.
Acetic ether, of each, 5 parts.
Menthol, 3 parts.
Camphor, 1 part.

Dissolve. For application to the tooth.—(*New York Medical Journal*.)
