SAYS SCOTCH PEOPLE NOT MOVING TO CATHOLICISM

The Rev. Dr. Scrimger, principal of the Montreal Presbyterian College, who arrived home last week from Scotland, after a two months' trip, declared there was absolutely no movement among the Scottish people towards the Roman Catholic church. He said if Roman Catholics are increased in number, it is due to immigration from Ireland and that neither the Presbyterian or Methodist churches are losing ground, as has been announced in a despatch.

Dr. Scrimger went to Scotland as the representative of Canadian Presbyterianism in the Scottish General Assemblies. Speaking of the general conditions there, Dr. Scrimger said the religious position has gradually settled down and that there are few traces of the great conflict of a decade ago.

WOMAN RULE IN CALIFORNIA

Female Suffrage Threatens To
Bankrupt the State

UTOPIA VIA LEGISLATURE

Creates Thirty-one Uplift Commissions and Increases Appropriations \$3,000,000 — Orgy of Freak Bills and Things Have Only Started

A bitter indictment of the manner in which California has been governed since women were given the right to vote in that state is contained in a report made by Miss Alice Hill Chittenden, president of the New York State Anti-Suffrage Association, which was given out for publication recently by the Washington headquarters of the National Association Opposed to Woman Suffrage. The report is based, it was explained, on a three months' investigation made by Miss Chittenden in California.

"Creating the millennium with the ballot and regardless of the staggering cost," says Miss Chittenden, "has been California's beautiful dream since women suffrage carried the state months ago. Children are not to be separated from their parents because of poverty. The state is to subsidize the home. School teachers are to be pensioned. Old people are to receive an annual income. Prisoners are to be paid for their work in the jails. A regime of ease and comfort is to dawn in the Golden State. And then everybody in the community will be happy except the taxpayers, who must become paupers or criminals before they can draw dividends on their investments in California's Utopian scheme."

No Money in the Treasury
"The appropriation for governing California, with its population of 2,771,649, (census of 1910), for the coming year is nearly \$20,000,000," Miss Chittenden's report continues. "This is an increase of about \$8,000,000 over the amount appropriated two years ago, just before the suffrage was given to women by the male voters of the state. This increase is not surprising when one learns that thirty-one commissions were created by the legislature that adjourned a few weeks ago. It is estimated that the annual expenses of these commissions will amount to about \$1,000,000."

"While these reforms are being bought and paid for the announcement is made that California has no money in its treasury to erect a state building to house a state exhibit at the great Panama Exposition to be held in San Francisco in 1915. The building must be paid for out of the county treasuries. "The last legislature enacted a series of alms commissions to study or investigate almost every conceivable subject but I will enumerate just a few of them. There is an industrial accident commission, with an appropriation of \$812,470; a civil service commission, with a board of apical examiners, \$10,000; and \$200,000 was appropriated to pay the salaries of three inspectors to visit houses where orphans and half orphans are maintained by state aid. This is in addition to the proposed expenditure of a large sum of mothers' pensions, twenty thousand dollars is also appropriated for a board of commissioners who shall determine the size of chicken coops. Another was framed to dictate the style of shoes school children should wear. Another sought to regulate the size of sheets used in hospitals. And presently the state went mad over the idea that everything under the sun can be regulated by law. The storm of protest against some of the measures passed by the legislature finally reached the governor's ears and he refused to sign some of the bills."

"These are but a few of the results born of women's entrance into the politics of the state. And California has only just begun to spend money to execute the millennium. The schemes advocated by the more radical suffragette reformers would, if carried out, bankrupt the state in a few years. Fortunately, the women of the state are growing tired of their new toy. The California situation is an object lesson to other states in which women are clamoring for the right to vote."

ALFAFA GROWING

A Timely Letter From H. G.
Sears With Suggestions

Editor Times:

Sir:—During the short time I have been here I have received numerous inquiries regarding alfalfa, its culture, seedling, etc., which leads me to believe that this awakened interest means much to the successful working out of the agricultural problems of how to produce cheap and valuable feed and at the same time enrich and strengthen the properties of the soil, and later on in active interest in the cattle, hog, sheep, and dairy production of the province.

I would therefore request that you kindly insert the following suggestions which I deem most essential for the successful culture of this Legume.

1st.—If after proper demonstration it develops alfalfa cannot be produced on your farm devote your energies to other lines. It is only reasonable to assume that some few localities are not adapted to alfalfa production. Few farms of 160 acres have more than 30 acres that is suitable, in the way of drainage, proper slope, etc., necessary for the successful production of alfalfa, and it is advisable to make the initial start on a few carefully light clay sub-soil, and not too close to water.

The drainage question is the first to consider—be sure and select land that has a gentle slope, and thoroughly surface drained. Extremes as to too high or low land are to be carefully avoided. Water standing one day on alfalfa in a depression will affect it materially, and if it freezes you can depend on a field with spots where the depressions will be filled up and water freeze, and later on such depressions will be filled up with a growth of weeds. It is not possible to secure a satisfactory crop from any soil without proper and adequate drainage.

Do not sow alfalfa on new breaking, as the roots do not penetrate below the plow line, and are liable to diverge along under the soil and water freeze, and later on such depressions will be filled up with a growth of weeds. It is not possible to secure a satisfactory crop from any soil without proper and adequate drainage.

lowed to dry out, or exposed to sun-
drying, the germs will be killed.

4th.—Sow about 15 pounds of clean, hardy, northern grown native seed, secured through your local dealer, such as the so-called variegated alfalfa now commonly grown in Montana, South Dakota, Minnesota and Ontario supply, it is harder for New Brunswick seed than Southern grown, and most of the imported seed.

Hardy climatic strains of seed are a pronounced necessity for climatic conditions found in this province. Remember good seed is determined not by the value of the first crop, but by its permanency. The seed should be sown evenly about one to one and a half inches in depth, using a small hand crank seeder if the acreage is small (1 to 10 acres). If the acreage is large use a disk drill with a grass seeder attachment, or a press drill.

8th.—Sow without a nurse crop, as same is not necessary during the growing season, and is liable to absorb part of the moisture necessary for the alfalfa. Do not mix alfalfa with grass seed. May 25 to June 5, or late in July up to August 7, is the proper time for sowing (there is considerable difference of opinion regarding the sowing season). Late seeding gives time for necessary previous cultivation and weed extermination, and the farmer does not lose the use of the land for one year.

6th.—Thoroughly disk (or spring-toothing by using a harrow having spiked wheels instead of disks), the growing alfalfa in the spring will aid thin stands, break up the hard soil, divide the alfalfa crowns and give the plant an opportunity for growth several days earlier than it would receive under ordinary conditions—be sure and keep the first crop growing as rapidly as possible to prevent thin stands and promote successful permanent fields.

7th.—Rotate your Alfalfa land every five years, then sow oats, barley or potatoes. Alfalfa should not be pastured until the third year, stock trampling on same prior to that time will work serious damage—after the third year it will be found to furnish pasture of the highest quality for all kinds of live stock. It is advisable to ring pigs before turning them into the alfalfa, otherwise they may root up many plants.

LOGIC
Logic is a method employed by some people to convince themselves that they are right upon any question in which it would be extremely inconvenient for them to be wrong.

Logic is indulged in almost exclusively by professors and young married men. Old married men know better. They usually employ silence instead.

Logic is generally used as a substitute for experience. It is not essayed upon several occasions to compete with ridicule, but has generally failed to come to the fore in the most important situations. Logic shrinks before poetry, invention, art and character. It is the last resort of mediocrity.—Life.

FORESTRY IN SOUTH AFRICA

A Progressive Policy Insanaged by
the Federal Government There

The report recently issued by the Chief Conservator of Forests in South Africa for the year ended December 31, 1911, is of considerable interest by way of comparison with what is being done along forestry lines in Canada. For such a young union the progress made is remarkable, and considerable credit is due to the forest department for the efficiency already attained in administration and fire-protection.
