Part VII. Diagnosis of Diseases of the Blood, and of the Blood-building Organs

Section I. Methods of Examination

	PAGE
A. General Introduction	1
1. Brief Review of the Physical and Chemical Properties of the Blood	4
(a) Coagulation of the Blood	5
(b) Total Quantity of Blood; Volume-percentages of Corpuscles and Plasma; Volume-index (Capps); Water Content	7
(c) Color of the Blood; Hemoglobin; Blood Gases	10
(d) Reaction and Reactivity of the Blood; Its "Acidity-capacity"	12
(e) The Specific Gravity of the Blood	13
(f) Molecular and Ionic Concentration of the Blood; Osmotic Pressure; Electrical Conductivity	13
(g) Permeability of the Red Blood-corpuscles; Osmotic, Thermal, Mechanical, and Hemolytic Resistance	14
(h) The Viscosity of the Blood (η)	15
(i) Chemical Composition of the Blood	16
(j) Ferments of the Blood	20
2. Brief Review of the Formed Elements of the Blood	22
(a) The Red Blood-corpuscles (Erythrocytes)	23
(b) The White Blood-corpuscles (Leukocytes)	25
(c) The Blood Platelets	27
(d) The Hemoconia	28
3. Brief Review of the Birth, Duration of Life, and Death of the Formed Elements of the Blood	28
(a) The Birth of the Red Blood-corpuscles (Erythropoiesis)	28
(b) The Duration of Life and the Death of the Red Blood-corpuscles	29
