

"Deserves the heartiest of welcomes and ought to be read by everybody from the President down. Nothing on the subject has been published for years so effective, clear, and popular." — *The Literary World*.

IRRIGATION

By **FREDERICK HAYNES NEWELL**

Chief Hydrographer, United States Geological Survey

This book has had an extended and notable sale, being largely purchased by Congressmen, Senators, and others interested in the public welfare of this country. The book deals clearly and interestingly with a problem now before our lawmakers' minds: How best to develop our vacant desert lands (two thirds of our national territory) and make them fit for the home-people.

"A candid statement of unvarnished facts." — *Forest*.

"Will be taken as authority." — *Dallas (Texas) Times-Herald*.

"The first comprehensive work of popular character concerning an industry greater than the largest industrial combination of modern times." — *Kansas City Star*.

"Should have an important influence on the practice of irrigation, and also on legislation dealing with methods of land surveying and of water distribution." — **ISRAEL C. RUSSELL**, Professor of Geology in the University of Michigan.

"A clear, simple, comprehensive, well-illustrated work by one who thoroughly understands all the conditions as they actually exist." — **E. C. MURPHY**, Hydrographer, U. S. G. S.

"If there is a man in the entire United States who is fully competent to write a work upon Irrigation, it is Professor Newell." — **W. M. WOOLDRIDGE**, U. S. Commissioner, Industrial Agent G. N. Ry.
