FEBRUARY.—As soft or bituminous coal is becoming more extensively used, especially in our large towns or cities; we think it worth while to say that the soot of this coal is exceedingly valuable as a fertilizer. None of it should be lost. It accumulates rapidly in chimneys, and must be often removed. Among other things it contains carbonate of lime and magnesia; sulphate and acetate of lime; phosphate of lime; acetate of ammonia, and charcoal powder. It is enough to mention these in proof of the fertilizing qualities of soot. In Europe it has been used for many years as a top-dressing to all crops, and has a specially beneficial effect in grass, wheat and oats. The turnip fly, and the caterpillar, which eats the cabbages, have a great dislike to it. It is best applied before rain sets in, but in dry weather should be used with caution as to quantity, not more than four bushels an acre, in repeated applications.

Jacobs' Rheumatic Liquid Cures Diarrhoea.

Dr. Colby's Pills are Sugar-Coated.
