

Children Cry for Fletcher's

# CASTORIA

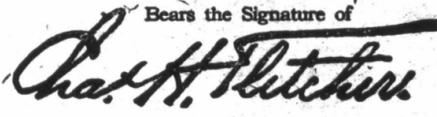

Fletcher's Castoria is strictly a remedy for Infants and Children. Foods are specially prepared for babies. A baby's medicine is even more essential for Baby. Remedies primarily prepared for grown-ups are not interchangeable. It was the need of a remedy for the common ailments of Infants and Children that brought Castoria before the public after years of research, and no claim has been made for it that its use for over 30 years has not proven.

## What is CASTORIA?

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is pleasant. It contains neither Opium, Morphine nor other narcotic substance. Its age is its guarantee. For more than thirty years it has been in constant use for the relief of Constipation, Flatulency, Wind Colic and Diarrhoea; allaying Feverishness arising therefrom, and by regulating the Stomach and Bowels, aids the assimilation of Food; giving healthy and natural sleep. The Children's Comfort—The Mother's Friend.

### Reason for Lord Beaverbrook's Visit

MONTREAL, Aug. 28—Lord Beaverbrook, owner of the London Daily Express, is expected here from New York to-day. It is said that he is visiting Canada in connection with a big pulp and paper merger.

The entry of English capital into the pulp and paper industry of this province has not only stimulated the buying of stocks in the many operating companies, but there is not the least doubt that negotiations are now in the course of process for the purchase of the controlling interest of one or two other large paper and pulp companies in Quebec by other than the Northcliffe interests in Great Britain, and this fact may give rise to the rumors of further amalgamations.

### TEN CENT SUGAR?

A government expert on the sugar situation says that while sugar prices are tumbling in the United States, Canadian wholesalers, jobbers and others maintain their united front to the effect that it is not going down in Canada. He proposes that sugar will be around ten cents a pound in the not distant future.

The present situation in Canada is that sugar is selling on an average of twenty-six cents a pound retail.

### Apple and Pear Blight

Blight of apple and pear is a specific and contagious disease. Some varieties of pears are more susceptible to this disease than are others. There are three places on the tree where blight commonly occurs, the blossoms, twigs and larger limbs or trunk. The names blossom-blight, twig-blight and trunk-blight or canker are commonly used but it should be remembered that these are different manifestations of the same disease. The bacteria which cause blight grow as parasites in the inner bark tissue and kill it. The individual bacteria are so small that they are scarcely visible to the naked eye. Nevertheless they are present by millions. They live over the winter at the edge of the cankers on the limbs and trunks. When warm weather comes in the spring they multiply to the extent that they ooze out in small drops near the edge of the canker. It is at this point that the new season's destruction begins.

Bees and other insects are attracted by the ooze and as they are attracted they become smeared with it. They carry the bacteria from place to place. In this way bees deposit bacteria in the blossoms that they visit and a few days later the blossoms wilt and turn black. In a similar manner other insects in their roaming, inoculate a few bacteria into the bark here and there and twig blight results. All this could be avoided by the grower of apples and pears if the cankers from which the ooze comes were eradicated during the winter. The cankers are irregular and slightly sunken areas of bark usually separated from healthy bark by a definite crack. By cutting into the canker it will be found that the bark is dry and brown. To remove the canker make a straight, tapered cut with a sharp pointed knife, always keeping the outline of the cut at least a half inch outside the edge of the canker. The ends of the cut are brought to a sharp point to facilitate healing. After this outline cut has been made just deep enough to cut through to the wood, the bark is peeled off. Adhering shreds of bark should be removed and the wood scraped. It is advisable to wash the wound with complete sublimate solution (one tablet to a pint of water) which though rather drastic is in very important these are other sources of infection in the spring which need attention. Badly infected trees should be cut down and burned. Wild crab apple trees and hawthorns are often blighted and they should be removed from the vicinity of the orchard. Care should be taken also that any twigs which were blighted the past season are removed. They are evident during the winter by the fact that the dead leaves cling to them. All suckers or water sprouts should be removed several times during the season. The operations outlined above must be carried out thoroughly if blight is to be killed from them. They all serve to reduce the chances of infection the next spring if they are finished before any warm weather comes. During the winter and early summer the grower should make a careful inspection two or three times a week walking down on a tree. All blighted branches should be removed as cut off several inches below the blight.

### Carries Tanlac Across Atlantic

#### Dreaded to Put to Sea Without Medicine That Relieved His Stomach Trouble

Before starting on his last trip across the Atlantic with a load of 840 quintals of fish, Captain Fred Hollett of Burin, called in at Connor's Drug Store in St. John's, to get six bottles of Tanlac, as he expected to be away for some months.

"So long as I've got Tanlac with me I don't fear the trip," said Capt. Hollett, "but I've been such a sufferer from stomach trouble that I just dread putting to sea without it for Tanlac is the only thing that ever did me any good. Mine was a pretty bad case. I don't believe a year ever suffered more than I did with our going out of his mind. For eight years I never touched a meal without severe distress and stomach pain afterwards that fairly doubled me up. never seemed to get any good out of my food and always seemed played out and weak. I had such headaches that they made me dizzy-headed and I often had bid light spells. I never slept well of a night and would get up in the morning with a bad taste in my mouth and feeling so sick that I couldn't touch a bite of breakfast. I got advice both in European ports and here in Newfoundland and was told that I had catarrh of the stomach. I took lots of medicine, but it was all money thrown away for all the good it ever did me.

"When I came in from my last voyage, everybody seemed to be talking about Tanlac, and after reading of several people I know who had got help from it, I decided it was just about what I needed. And sure enough Tanlac fixed me up all right. Why I can now eat anything the cook puts before me and it never has any bad after effects whatsoever. I enjoy breakfast, which is a thing I haven't done for years and I sleep just fine every night. I'm on deck for duty every day without fail and to tell you the truth I feel a different man entirely."

Tanlac is sold in Newcastle by E. J. Morris, in Redbank by Wm. M. Sullivan and in Daoktown by O. Hildebrand.

### Arabs Repulsed

Bagdad, Aug. 28—The British forces operating near Hillah engaged the Arabs and repulsed them with heavy losses. (The Arabs) concentrated at Bahak, thirty miles from Bagdad, have been effectively dealt with.

All is quiet on the Tigris and at Karad and in the direction of Mosul.

### Bilious? Take NR Tonight

Nature's Remedy is better and safer than Calomel, Cassia and Senna. It is a gentle, reliable, safe and effective.

Bilious attacks, constipation, flatulencies, etc., are in the great majority of cases due to a weak, irritable, and unbalanced system. It is a reasonable person can expect to obtain relief or lasting benefit until the cause is corrected.

Nature's Remedy (NR Tablets) is a vegetable compound that acts on the stomach, liver, bowels and kidneys, the purpose being to bring about healthy and harmonious action of all the organs of digestion and absorption. It acts promptly and thoroughly, yet so mildly and gently that there is no danger of the stomach or kidneys being injured.

The fact that out of Nature's Remedy (NR Tablets) have a beneficial effect upon the entire body, by removing the excess of acid and stimulating the normal action of the whole system.

Once you get your body into this condition every day you take an NR Tablet, and you will find that your bowels and stomach are in perfect health and you will be able to eat and sleep as usual.

Get your NR Tablets at all drug stores and health food stores. It is not a secret to know that an NR Tablet is a vegetable compound that acts on the stomach, liver, bowels and kidneys.

### Bishop O'Leary May be Transferred

Some time ago it was stated in an Edmonton, Alberta paper that the Right Rev. Henry J. O'Leary, Bishop of Charlottetown, was likely to be transferred to Edmonton, to succeed the late Archbishop Legal. The report did not receive much circulation in Eastern Canada, but it is now revived in a Canadian Press despatch from Charlottetown which declares that it is rumored there that the promotion of Bishop O'Leary is to take place. The Charlottetown despatch further says that Right Rev. Louis J. O'Leary, who was Auxiliary Bishop of Chatham, it has been generally believed was recommended to succeed the late Bishop Barry, and his appointment had been anticipated for some time past. Possibly, the delay at Rome was due to the consideration of other plans. Whatever may happen in connection however, it seems likely that the report of the probable transfer of Bishop O'Leary has a basis of fact. The Bishop of Charlottetown is an exceedingly able and zealous prelate, and Prince Edward Island will be the loser by his departure.

### The Cash Value of a Pedigree

All animals have a pedigree of some sort whether pure-bred or scrub. Only the pure-bred animals have their pedigree registered and have pedigree certificates issued. A pedigree is valuable only when it proves some fact that is worth while about an animal, either favorably or otherwise. We frequently hear comments of some such nature as "I do not care about the papers it is the cow I want." Speaking broadly that may be good business for a butcher but the real stock breeder is paying more attention to pedigree than ever before and we often hear him say "that is a beautiful individual but I do not like her breeding."

The man who attaches the most value to a pedigree is the one who knows the most about its true value. The pedigree student may learn of a cow that has had a brilliant showing career. She may be particularly pleasing to the eye in type, form and conformation. He studies her pedigree and finds that she has sprung from ancestors that were of little value and immediately decides to let her alone, regarding her as a freak. On the other hand he may find a cow that is not a particularly fine individual in type but he studies her pedigree and finds that she has for ancestors some of the very best animals of the breed. He decides to buy the cow going on what he knows about her ancestors. He has made use of the pedigree to select a cow that he has not, as so many are inclined to state, paid a big figure for papers.

Pedigree does not make value, it decides value by establishing the lineage of ancestry. The cow backed by several generations of good producers is much more liable to be the dam of producers than the course always hold true. Just as we frequently find a good individual with a poor line of ancestors so do we find poor individuals with strong ancestors. Like, as a general rule, produces like, but the law of variation is also felt. The pedigree student studies these laws and draws his conclusion.

When a cow is purchased for a breeding herd two things are kept in mind, first the value of the cow for what milk she will produce and secondly, the effect she will have upon the future of the herd. A good judge of dairy cattle can estimate closely her value as a milk producer but her worth as a herd improver must be determined chiefly by pedigree.

Individual merit is very important and should not be overlooked yet it must not be the main deciding point. History shows us some excellent individuals who have apparently sprung from inferior stock and later have become wonderful production cows. Such animals are valuable if properly developed, but the owner must have skill and patience to handle a problem of this kind as often, after a few generations, there may be a reversion back to the old ancestral type.

Some herds have been built almost to perfection with the entire herd, the owner is a true stock breeder and wishes to have as perfect a herd as possible. He decides to secure a new sire and correct this fault. He selects an animal not only strong himself where the defect is shown in the herd, but the breeder shows that the animal is from families perfect in this respect. This sire is sure certain to correct the fault than an animal who is "true" individually but past, on all, of his pedigree.

It is not a secret to know that an NR Tablet is a vegetable compound that acts on the stomach, liver, bowels and kidneys.

### Carpentier May Fight Dempsey

Jack Dempsey has made an agreement with Tex Rickard, who promoted the Dempsey-Wills fight, to meet Georges Carpentier, the French champion, it was announced by Jack Kearns, the champion's manager.

Kearns refused to divulge the details of the agreement, other than to say that Rickard had been given a definite length of time to arrange the fight. Kearns said it was his understanding that Rickard had negotiated with C. B. Cochran, the British promoter, said to have a similar contract with Carpentier, and that the fight would be held in Madison Square Garden, New York, shortly after Carpentier returns to this country in September.
