Drug Reports.

Canada.

As is usual at this season of the year all heavy goods stiffen in price, and will be firm until summer freight rates come into force. Business keeps fairly active, and is, if anything, ahead of last year. The signs of the times indicate we are on the eve of better times.

Norway cod liver oil has advanced in price in Europe almost double, and will likely be much higher. It is worth today \$2 per gallon, and, as the prices are based on the catch made from January to March, it will be no lower for a year. The catch of fish is small, and the livers of those caught contain little oil.

Cocaine is 10 per cent. higher, and the outlook indicates a further advance.

Gum tragacanth is all 25 per cent. higher. Gum acacias may sympathize with them.

Salicylic acid and salicylate soda easier in price.

Sulphonal is 25 per cent. higher, very little in stock in this market at present. It is reported, in the future, sulfonal and phenacetine can only be had in ounces.

Bromides are all higher, principally ammon bromide, soda bromide, etc.

Aloes, all kinds, are dearer on account of small production.

Antitoxine, a new antipyretic, is worth \$1.50 per ounce, in one ounce boxes.

Laviolette's Syrup of Turpentine has been reduced to \$1.60 per dozen, or \$18 per gross.

England.

London, Jan. 26th, 1895.

The drug and chemical markets have been very dull, and transactions for the most part have been of a jobbing character. A concerted attempt has been made to abolish the old London terms, which included a draft or trell of one or two

pounds extra allowed by the seller to the buyer on each cwt.

Sulphonal has advanced, owing to the amalgamation of the two principal manufacturers. Salicine is also dearer, the reason being a short crop of the willow bark. Gum Kino is gradually reaching famine price, as no more appears coming forward. The export season is responsible for the rise in value of copper sulphate.

Quinine and opium are quiet, and there are no alterations to note. Camphor is lower, and ergot easier. Jalap, senega, and ipecacuanha, steady, with a firmer tendency. Cascara bark realized extreme prices at the auctions this week, but other drugs were, for the most part, unaltered in value.

ANTITETRAZIN is the name given in Italy to an alleged quinine derivative, and recommended by Zambeletti, of Milan, as an effective analgesic in rheumatism and kindred ailments. The dose is 0.75 to 1.5 per day.

Montreal.
