The request which we made in last Almanack, to Adjutants of Regiments throughout the Province, for correct lists of officers, has not been complied with. In the mean time we have given the returns of the Halifax Regiments, and still solicit correct returns for our next Calendar.

BISCUIT MACHINE.—The navy board is manufacturing biscuits at Portsmouth by machinery. The first process is that of mixing the meal (5 cwt) with a sufficient quantity of water, which is accomplished in two minutes; the second process is that of rolling the dough, which is placed on boards, to its proper thickness; and the third and last process is passing the dough, when rolled, under the stamping machines, which will stamp the extraordinary number of 360 per minute, or 21,600 per hour. The whole of these operations are performed without the dough coming into contact with the hand or any other part of the body, and the machine perform their respective duties with admirable precision, expedition, and cleanliness, and have fully answered the most sanguine expectations of their spirited inventor.

POWERFUL!—At the Gloucester Assizes, a person named Blackman was tried for sheep stealing, and while one of the witnesses was giving evidence of a confession, the prisoner exclaimed, "You are a false fellow; you would swear a grey horse was a chandler's shop, and every hair upon his back a pound of candles."

A village Politician told his wife that the low countries had risen (alluding to the disturbances in the Netherlands) "I am glad of it," exclaimed the old dame; "we shall not hear of the floods doing so much damage again."

How to act in case of doubt.—In cases of doubtful morality it is usual to say, 'Is there any harm in doing this?' The question may be best answered by asking ourselves another question, 'Is there any harm in letting it alone.'
