No Summer Vacation

We would greatly enjoy one, but as many of our students come from long distances, and are anxious to be ready for situations as soon as possible our classes will be continued without interruption.

Then, St. John's cool summer weather makes study during the warmest months just as pleasant as at any other time.

Students can enter at any time

HERE IS GOOD ADVICE TO TAKE

It will help those who have Kidney and Bladder Trouble. There are other "old enemies" similar to the one mentioned in this testimonial. Kidney and Bladder Troubles are always enemies to good health. As soon as you start to take **GIN PILLS** these ailments begin to disappear. It is the same in cases of Lumbago, Sciatica and like complaints. This letter illustrates the benefit of **GIN PILLS**.

Winnipeg, Jan. 6th.
"I have been a sufferer from Lumbago for some years past and during Christmas week had a very acute attack which confined me to the house. About the latter part of April, I met your Mr. Hill and mentioned my complaint to him. He advised me to take **GIN PILLS**. I have been taking them at intervals during the early part of the present winter, and up to date have had no return of my old trouble—in fact, I feel better than I have for years and think that my old enemy has vanished for good and all."

The Scientific Application of Fertilizers to Trees When Planted Out

WAGNER, J. PH. (Prof. of Agriculture at Ettelbruck, Luxemburg.)

The application of fertilizers to trees in general, and to young trees when they are planted out in particular, is, according to the writer, a very vexed question.

He considers the following three points—

(a) The situation of the roots of the tree in the soil.

(b) The nature of the young tree, its susceptibility to fungus diseases.

(c) The method of action of different fertilizers.

An account is given of the following method. The chemical fertilizers (phosphopotassic) are well mixed with the superficial soil, which is to be put first of all in the trench; then comes a layer of ordinary soil 8 to 12 inches deep, next the nitrogenous fertilizer, if this is used (nitrate of soda, sulphate of ammonia, guano, &c.) and finally, the last layer of soil to fill up the trench.

The soluble nitrogen in nitrogen-fertilizers finds its way gradually to the roots; thus a nitrogenous fertilizer of a very caustic nature is no longer in direct contact with the roots where it might be harmful.

The organic manures are placed in an intermediate layer, neither too deep nor too superficial, and without being in direct contact with the roots they do not incur any risk of loss or of drying up; they are besides rendered powerless as propagators of fungus diseases.

The phosphoric acid and potash contained in less mobile artificial fertilizers are directly within reach of the roots and can be absorbed as they become capable of assimilation.

The writer adds that it is well to give the young tree for about three years, in some form or other: 25-30 gr. (about 1 oz.) of nitrogen, 30-40 gr. (1 to 1 1/4 oz.) of phosphoric acid, 40-45 gr. (about 1 1/2 oz.) of potash, 25-30 gr. (about 1 oz.) of lime, which about corresponds to: 7 oz. of nitrate of soda, 7 to 9 oz. of basic slag, or the corresponding weight of superphosphate, and 3 oz. of potassium chloride. If the soil is not too poor in lime, the lime contained in the slag suffices. The fertilizers, in the amounts calculated for three years, should be applied on the surface, and at the end of this time should be dug in as deep as possible, so that they may reach the roots.

Hog cholera has been discovered in Brantford, Ont., and fourteen head shot at the order of Dominion Inspector Perdue. The swine were shipped to a Brantford packing house from an outside point and disposed of locally. The authorities propose to trace the source of supply and carry out a right investigation.

Minard's Liniment Cures Diphtheria

berries, and for other purposes, is getting to be a very common practice. The fruit is sweetened to taste and crushed and may be stored in glass fruit jars or tin cans or any other suitable package. Or the fruit may be had as whole ripe fruit by filling the receptacle in which it is stored with the whole berries and the juice and pulp of the crushed fruit poured over them. The jar should be filled full to exclude the air, or whatever pack is used should be treated in the same way and fitted with a tight cover. The syrup should fill the space. It is claimed that this method brings the fruit out of storage with perfectly fresh flavor and in as good condition for all sorts of purposes as it was when fresh.

Electric Restorer for Men
Phosphonal restores every nerve in the body to its proper tension restores vitality. Premature decay and all sexual weakness averted at once. Phosphonal will make you a new man. Price \$3 a box, or two for \$5. Mailed to any address. The Scotch Drug Co., St. Catharines, Ont.

For dry cleaning spread a sheet on the table, and upon it make a layer of flour about two inches thick. Upon this place your garment, and cover with another layer. Turn the rest of the sheet over and leave for 36 hours then brush well.

At the Yarmouth Y. M. C. A. Boys' Camp held at Tusket Falls in August, I found **MINARD'S LINIMENT** most beneficial for sun burn, an immediate relief for colic and toothache.
