

7. In the average results from growing winter wheat for seven years in succession, it is observed that the white grained varieties have given the largest yields per acre in those seasons when there was but little rust, and the red grained varieties in those seasons in which the rust was abundant.

8. The varieties which have given the best average results in the experiments at the College are the varieties which have also given the best satisfaction throughout Ontario.

DISTRIBUTION OF SEED FOR TESTING PURPOSES.

In the following table will be found three sets of winter wheat varieties, which will be sent free by mail, in half-pound lots of each variety, to farmers applying for them, who will carefully test the three kinds in the set which they choose and report the results after harvest next year. The sets will be sent out in the order in which they are received, as long as the supply lasts.

THREE SETS OF WINTER WHEAT FOR CO-OPERATIVE TESTS.

Set 1.	Set 2.	Set 3.
Dawson's Golden Chaff. Early Genesee Giant. Early Red Clawson.	Dawson's Golden Chaff. Pride of Genesee. Poole.	Dawson's Golden Chaff. Stewart's Champion. Siberian.

Each person wishing one of these sets should write to the Experimentalist, Agricultural College, Guelph, *mentioning which set he wishes*, and the grain, with instructions for testing and blank forms on which to report, will be forwarded free of cost to his address, until the supply of grain for distribution is exhausted.
