J. W. LANGMUIR, Managing Director

She Resented the Insult.

"I couldn't help it, papa!" She looked up into his face with her frank blue eyes, and it was impossible to doubt her.
"But you didn't seem to be protesting

very much," said the old gentleman.

But it was so sudden, papa, that I couldn't," she insisted. "Tell me about it," he said. "Well, he adopted a very clever ruse, you see. He got me to look the other way, and then, before I knew it, he had kissed me on the cheeks."

"The scoundrel !" "It was wrong of him, of course." "What did you do then ?"

"I was very angry. I told him it was "Indeed it was, and you should have ordered him to leave the house. Did

"N-no: not exactly." "Well, what did you do?" "I told him it was an insult, and that

he must take it back." "He was taking it back when you

came in and saw him."-Chicago Post.

A good story is told of Chauncey Depew. He received a letter from a young married friend in Albany asking for a pass for his mother-in-law, who was get to have the return coupon attach-ed." Mr. Denew to Mr. Depew is nothing if not worldly wise and sympathetic, and in sending the pass he wrote: "I have not neglected the return coupon, and have limited it to three days."-Minneapolis Journal.

Feeding Dairy Cows.

A series of observations of the winter feeding practices of Connecticut dairymen has led the Storrs station to the conclusion that in general there was the largest yield of filk and the largest butter production with narrow rations rich in protein. Wide rations low in protein did not favor large milk or butter production. In the three tests when it was possible to study the financial side of the feeding narrow rations rich in protein were decidedly the more economical. Bearing in mind that there is/such a thing as a "best ration," and that all attempts to express in terms of protein and energy the needs of a dairy ow are only approximations, the following ration is tentatively suggested as a basis for feeding dairy cows:

Organic matter, 25 pounds; digestible protein, 2.5 pounds and enough digestible fat and carbohydrates to bring the

The subject of cattle feeding and handling is a large one, and only general principles can be laid down. No hard and fast rules for feeding are now known, and doubtless none ever will be known. It is nevertheless true that the man who exercises the largest good enough Mulvaney for the Pacific amount of good judgment, based upon bring to him, and who tries to put into practice the knowledge thus acquired, to play, for Terence alone of living will be much surer of success than one who works blindly. There may be no How did Dearsley come by the palan "best" ration, and no "best" way of quin?" It is not one of the questions handling dairy stock, but there are poor cows, uneconomical rations and bad ways of handling, and the man who learns to avoid the bad and choose the better is well on the road to wards the

TO BUILD A CEMENT SILO.

but are More Expensive in the End. If your site requires any excavation

or drainage, see that it is thoroughly done, for no wall will give much service on a shaky foundation; then good way to build is to get some 2 1-2 x 5x16 spruce pieces. When the site i all leveled and ready, first lay down spruce boards long enough to reach one foot further than the width of the in nded silo from outside of the walls. Then take the two spruce pieces above mentioned, nail a board across eight feet below the first one nailed on, measuring from top, also laying a board on the others. Now set these two pieces upright, placing the end upon these oards that have been laid down to receive them. These pieces should be placed 21 in. apart. Fasten to these boards and stay lathe the tops. Be sure to make them fast and absolutely plumb, for upon these depends the accuracy of the wall.

Now draw a line from this point to the end of the desired wall and set up two more upright pieces at this point the same as you did first. Be sure you get them straight and plumb; set these pieces every eight feet around the silo. After this is done get some spruce plank field it is. They asked me if I would larger lens will ever be made. Under ing in, the horse is removed from the planed on one side, 1 1-2x2x14 in by onehalf the length of the silo; square the of tidies," he added modestly. "but I than the Yerkes—the telescope of the haven't enough confidence in myself."

"O why don't you?" she cried. I am which the lens is made—would be of no sure you could do it deer, and all these great value. To forward the right position for harness—the right of the silo; square the ends and let these form a box around the silo, having the plank reach the center study which have been placed there are added to the silo; square the ends and let these form a box around the silo; square the ends and let these form a box around the silo; square the ends and let these form a box around the silo; square the ends and let these form a box around the silo; square the ends and let these form a box around the silo; square the ends and let these form a box around the silo; square the ends and let these form a box around the silo; square the ends and let these form a box around the silo; square the ends and let these form a box around the silo; square the ends and let these form a box around the silo; square the ends and let these form a box around the silo; square the ends and let these form a box around the silo; square the ends and let these form a box around the silo; square the ends and let these form a box around the silo; square the ends and let these form a box around the silo; square the ends and let these form a box around the silo; square the ends and let these form a box around the silo; square the ends and let these form a box around the silo; square the ends and let these form a box around the ends are the ends and let these form a box around the silo; square the ends are the ends ar sure you could do it, dear, and all these things will be such a help in your future life. You are a dear, good boy, and you try so hard to please me."

When the delis is made—would be of no it is in the right position for hardes, ing and driving out when next used, ing and driving out when next used, ing and driving out when next used. The main floor has a "well" above it, there to receive them; also having the right position for hardes.

The main floor has a "well" above it, there to receive them; also having boards across on the ground under the desired wall to fasten these upright protected by a high railing and a grature of the protected by a high railing and driving out when next used. around the silo 14 inches high and 18 inches wide. We will now fill this box half-full of stones, taking care not to force any stones into the box that is more than 17 inches wide, but it is no matter how long the stone is. Be sure to get all the stones you can into the box, for the more stones you get in the less cement is required. Any stone that you can get the cheapest is the kind for this purpose.

Mix one barrel of the best Rosen dale cement with two barrels of good, clean sand free from dirt. Have your box large enough to mix this amount at one time, and have plenty of water at hand. Now fill fhe box one inch above the stones that have been placed in the box, taking care that the cement is thin enough to run all through between the stones so as to make your wall air-tight and solid. Then fill in more stones and cement until the box is full. We are now ready to raise the planks and fill again and again until the wall is as high as you desire. In fixing the planks in position always place a shingle or some thin piec against the upright piece behind the planks, and when you desire to raise the planks, first remove the shingles or thin pices. This will loosen the planks so that they can be raised easily with

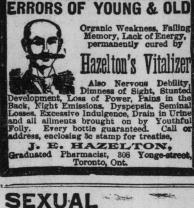

out disturbing the wall. A silo of the dimensions of 30x15x15 feet in the center, with thickness of wall 18 inches will require 60 barrels of inch bottom which is of sufficient thickness: but be sure and have nerfec On ordinary rations the yield of milk drainage. The roof can be made as one desires. I think wood silos cost less in
