"BIRD OF SILENCE"

Crane, amidst thy blenching sedge,
Where no vernal zephyrs cool
Flies round the treeless edges
Of the shallow desert pool.
Tell us of the things you ponder
Drowning on the banks of Nile,
Secrets of a land of wonder,
Pyramid and ancient pile,
Or the Hebrew infant riding
Shoreward in the sultry breeze,
Past the barge of Pharaoh gliding,
Tutankhamen—Ramesses—
Cult of Isis and Osiris,
Relicts of their temple gray:
Visions of the past inspire us,
Who are but of yesterday,
Haunter of the sacred river,
Comrade of the mystic sphinx
Saw you ever an eyelid quiver,
If perchance the monster thinks?
Tumult of contending nations,
Passed before that stony stare:
Booming guns reverberations,
Could they start a tremor there?
Doth an inspiration rising
With the flood around thy knees,
Take thee back in swift surmising,
Ages long before all these?
Shadow of the praying Mantle,
Stranded at the base of Time,
Stretching back to old Atlantis,
Shining in her golden prime,
Tutankhamen—
Tutankhamen.

JET PANTS

A school boy asked to write a composition on a subject of his own choice turned in an "Essay on Pants" as follows:
"Pants are made for men and not for women. Women are made for men and not for pants. When a man pants for a woman and a woman pants for a man, that makes a pair of pants.
"Pants are like molasses: they are thinner in hot weather, and thicker in cold weather.
"There has been much discussion as to whether pants are singular or plural. Seems to us that when men wear pants it is plural, and when they don't wear pants it is singular.
"If you want to make the pants last, make the coat first."—Exchange.

C. JUSTICE PROTESTS AGAINST POLICE TENDENCY TO DISCRIMINATE AGAINST MEN WITH PRISON RECORDS.

London.—What amounted to a protest against a tendency to treat too harshly a prisoner because he was known to be an habitual criminal was uttered by Lord Hewart, the lord chief justice in the court of criminal appeal, during the hearing of the appeal of George Clarke against a conviction at Leeds city sessions for warehouse breaking in Leeds and sentence of three years' penal servitude—also a sentence of seven years' preventive detention as an habitual criminal.

The lord chief justice, giving judgment, said that the facts were that Clarke was one of a gang of men who broke into a warehouse and took some cloth.

One of the men was Joe Karasafski, whose application had been dealt with by the court earlier.

Clarke had pleaded guilty to the indictment of warehouse breaking, and after that plea he was found guilty by the jury of being a habitual criminal.

It was undoubted that Clarke had a bad record, and his conviction as an habitual criminal rested upon a previous conviction in 1910 as an habitual criminal.

But it did not necessarily follow that because a man was found to be an habitual criminal he should of necessity be sentenced to a period of preventive detention. This was a matter that should be generally known.

Although Clarke's record was bad there was evidence that he had for many months worked honestly, and this once was the outcome of a sudden temptation placed in his way by Karasafski.

The sentence of preventive detention was not necessary, notwithstanding the conviction of appellant as an habitual criminal.

The court were of opinion that the justice of the case would be met by quashing the sentence of seven years' preventive detention as an habitual criminal, and reducing the sentence of three years' penal servitude for warehouse breaking to the same as that which had been given to the man Karasafski, namely, 18 months imprisonment with hard labor.

Clarke, who was in court, expressed his thanks to the judges.

GOLD SUCCEEDS SILVER AS PRICED COBALT OUTFIT

Known Mines Will Be Producing \$10,000,000 In 1925.

Toronto.—Mines gold is now being produced almost entirely from the mines of Porcupine and Kirkland Lake, the highest record ever established by the silver mining industry of Cobalt, writes the northern correspondent of the Globe.

Up to the middle of March the output of silver from Ontario, since the commencement of mining, has reached approximately \$222,000,000; this compares with at total gold production of approximately \$113,000,000, making a combined total of \$335,000,000.

In 1922 the output of gold and silver from Northern Ontario reached \$27,167,000. This being an increase of approximately \$7,000,000 over the output during 1921.

This rate of increase is doubly important when it is considered that the outlook is that a corresponding increase will be established each year for a considerable period.

Close observers are of opinion that the known gold mines will be producing \$40,000,000 a year after 1925.

PREPARING TO MAKE PAYMENT IN FULL

Washington.—The British government is preparing to make the full payment for this year under the recently negotiated refunding arrangement, and according to information reaching the Treasury Department will not exercise its option to defer half of its first yearly installment.

United Fruit Companies Dust Prices 1923

It has always been the policy of the United Fruit Companies to supply the highest quality of dust at the lowest price possible. When we first went into the dust business, dust was selling at \$11.50 per 100 lbs. in the Annapolis Valley. We steadily lowered this price until last year we sold Bordeaux dust at \$6.00, and 90-10 sulphur-lead arsenate dust at \$7.00, delivered to the farmer. Consistent with this policy we are again pleased to announce a further price reduction, a reduction which is only made possible because of the large state upon which we are now operating.

Prices (retail to the farmer from every local company).

Bordeaux Dust \$4.75 per 100 lbs.

90-10 Sulphur-lead Arsenate Dust, \$6.00 per 100 lbs.

Straight Superfine Dusting Sulphur, \$2.70 per 100 lbs.

Prices on other mixed dusts may be had on application, and are proportionately low.

The Bordeaux dust is of the same strength as last year, being composed of 12 lbs. dehydrated copper sulphate, 8 lbs. arsenate of lime, and 80 lbs. hydrated lime, or in other words a little over 4% metallic copper and a little over 2% metallic arsenic. This dust is little more than half the retail price of the same dust of the same strength sold by any other concern in America according to all the price lists now available.

The sulphur-lead arsenate dust is about two-thirds the price at which the same material may be bought in any other district.

The above dust mixtures are all standard dusts thoroughly tried and tested and well known in all American fruit growing areas, and it is consequently with much pride that we announce ourselves as pioneers in setting new low price standards on high quality materials.

We were early approached with regard to handling the new dusts known as "green dust" and "brown dust," which are dusts containing copper and arsenic in different forms from the regular Bordeaux, and in consequence we obtained from the Dominion Entomological Laboratory at Annapolis all the information and experimental figures relating to these new dusts. From an examination of this data we found:

1. That the "green dust" gave a very poor control of apple scab.
2. That the "brown dust" gave a control of apple scab on an average a little poorer than our regular Bordeaux dust.
3. That both these dusts were heavy materials and that it took nearly half as much again of these dusts, as compared with our regular Bordeaux dust, to cover the same area of orchard.

From the above we could come to the conclusion that these dusts were not only of lower quality than we desired, but also that they would be very expensive for an orchardist to use, and consequently that the handling of these dusts would not be consistent with the United Fruit Companies' policy of low cost and high quality.

We were further warned by the Provincial Entomologist in his speech before the Fruit Growers Association against the danger of changing from proven materials, to materials about which little was known. On the same occasion the officer in charge of the Dominion Entomological Laboratory stated that these new dusts were in some respects defective, were only in an experimental stage, and had not stood the test of time. These statements served to confirm us in our opinion, and in view of the low prices at which it was possible for us to supply standard dusts, the handling of these new dusts appeared to us the height of business folly.

We are informed from our Entomological advisers that it is possible that future experiments may find methods for improving and overcoming the defects of these new green and brown dusts. We are keeping ourselves informed on any development of this nature, and are ourselves participating in factory experiments with this end in view. In the event of such new methods being found we will be in a position to manufacture and supply green or brown dust at a retail price of about \$4.00 per 100 lbs.

The above is written to explain the policy of the United Fruit Companies, which is to only supply the best quality dusts at the lowest price possible, to handle no materials which have not proven their value in the hands of impartial experimenters, but at the same time to keep in touch with all new developments so that when sufficient is known about them they may be utilized for the benefit of all the farmers and not for the benefit of any private exploiters.

Spring Weather Hard On Baby

The Canadian Spring weather—one day mild and bright; the next raw and blustery—is extremely hard on the baby. Conditions are such that the mother cannot take the little one out for the fresh air so much to be desired. He is confined to the house which is often over-heated and badly ventilated. He catches cold; his little stomach and bowels become disordered and the mother soon has a sick baby to look after. To prevent this an occasional dose of Baby's Own Tablets should be given. They regulate the stomach and bowels, thus preventing or relieving colds, simple fevers, colic or any other of the many minor ills of childhood. The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

UNIQUE LAW SUIT RESULTS FROM UNIQUE ADVERTISING STUNT OF "BARKING" CENSUS DOGMEN.

London.—A case that is unique in the annals of the newspaper world, has just been decided in the courts here when the Houston Advertising Agency consented to judgment for an amount of over \$50,000 for advertising on the back of the amendment slips sent out with the Census papers of 1921.

Correspondence read by the Attorney-General showed that the contract entered into was for payment at the rate of \$5,000 per million forms, less 10 per cent. commission, and that the charge made was for actual circulation on a certificate showing that 10,000,000 forms were circulated.

The defendant, repudiated liability on the grounds that some of the slips did not bear the advertisement, but the Attorney-General explained there were two sets of instances in which the amendment slips were not circulated.

In a few cases there were a few people distributing the census papers who had a conscientious objection to Sunday newspapers, and the advertisement relating to Sunday newspaper.

Those people asked to be allowed to alter the census papers instead of circulating the slip, and that was done in 1,500 cases, and allowance was made for them.

The other instance was when the papers were printed in Welsh to be circulated in Wales, and it was thought that no benefit would accrue through an advertisement being in English.

As the conclusion of the Attorney-General's statement, counsel for the defendants, said that in the circumstances Mr. Houston had agreed that there must be judgment against him for the sum claimed.

It was desirable that Mr. Houston's situation should be understood. Mr. Houston was merely an agent in this matter.

His principal was Mr. Horatio Bottomley, against whom he had obtained judgment in this matter.

That judgment had been entirely unfulfilled, and it is left him in the position of having to submit to judgment for the amount claimed. He was, however, anxious that the money should be paid.

The judge said the course was a perfectly proper one, and entered judgment for the amount claimed, with costs.

SUGGEST SENDING GLADYS ROBINSON TO OLYMPIC GAMES

Toronto.—Miss Gladys Robinson, champion lady skater of America, will probably skate in Winnipeg before retiring for the season.

At Winnipeg, P. G. Mulqueen will suggest that Miss Robinson be sent to the next Olympiad as Canada's representative. If this suggestion is acted on, Miss Robinson will thus have an opportunity to compete for the world's championship, and in the experts in the fascinating winter sports believe that she will win. It is evident that the local star will have to look for other skaters to conquer, now that she has beaten the best that the United States has produced.

SILVER TAGS TRACE HISTORY OF SALMON

Ottawa.—A silver tag attached to the dorsal fin of a salmon before its release after the eggs have been removed at the Dominion government hatcheries, is one of the methods resorted to by the fisheries Dept. for tracing the life history of the fish.

Small sockeyes and Atlantic salmon, that have been retained and fed in enclosures for several months are also marked each year by removal of their adipose fin.

A reward of one dollar is paid by the department for the return of silver tags that are being attached to Atlantic salmon, together with some scales from the side of the fish and particulars regarding their length, weight and place of capture.
