

EMERY WHEELS FOR SAW GUMMING!

Solid Emery Wheels are now almost in universal use for the purpose of guillotining and gumming saws. Industries show from 25,000 to 30,000 saw-mills in the United States. Many of these run only a single saw each. A one-saw mill would use one or two wheels a year, costing \$3 to \$5 each, and when such small mills order single Emery Wheels from the factory, the express charges on top, equal the cost of the wheel. There was a time when the quality of Emery Wheels was an uncertain, and the demand so feeble, that storekeepers could not afford to carry them in stock. Now, however, Saw Gumming Wheels have become an staple article as files, and every dealer in saws, Hardware and Mill Supplies can afford to carry a few dozen standard sizes in stock. Large dealers order stocks of \$500 to \$700 worth at a time. Saw gumming Wheels are used with the edge (or face) square, round or beveled. Probably seven-eighths of all in use are beveled.

The principal sizes are:

8x $\frac{1}{2}$	18x $\frac{1}{2}$	10x $\frac{1}{2}$	12x $\frac{1}{2}$
8x $\frac{1}{2}$	18x $\frac{1}{2}$	10x $\frac{1}{2}$	12x $\frac{1}{2}$
8x $\frac{1}{2}$	18x $\frac{1}{2}$	10x $\frac{1}{2}$	12x $\frac{1}{2}$
8x $\frac{1}{2}$	18x $\frac{1}{2}$	10x $\frac{1}{2}$	12x $\frac{1}{2}$
8x $\frac{1}{2}$	18x $\frac{1}{2}$	10x $\frac{1}{2}$	12x $\frac{1}{2}$
		2, 3 and 1 inch.	Holes.
		10x $\frac{1}{2}$	12x $\frac{1}{2}$
		10x $\frac{1}{2}$	12x $\frac{1}{2}$
		10x $\frac{1}{2}$	12x $\frac{1}{2}$
		10x $\frac{1}{2}$	12x $\frac{1}{2}$

Probably more wheels 12x $\frac{1}{2}$, 12x, and 12x $\frac{1}{2}$ are used than all the other sizes together. Saw Gumming Wheels are used, however, of all sizes up to 24x $\frac{1}{2}$. The most frequent complaint is that Emery Wheels harden the saw so that a file won't touch it. The answer is that you don't want a file to touch it. An expert workman will shape and sharpen the teeth with an Emery Wheel, leaving the teeth case-hardened, in which condition the saw will cut about 33 per cent. faster lumber than a soft saw will. Those who want to use the file, however, have only to touch the saw lightly a second time (after filing, and over it, if you please), and this second touch will cut through the case-hardened scale.

A QUESTION OF QUALITY.

Thirteen years of experience as makers of, dealers in, and actual users of Emery Wheels, have led us to a decided opinion as to what quality is the best. We prefer for almost every use an "Extra Soft" wheel like the "Pocono." We believe that money lost through the rapid wear of the wheel is more than made up by the money saved on wages. As we cannot get every one to adopt our views, we make several qualities, so as to meet their views. We say to those who think they can only be satisfied with some other make of wheels (not Tanite), that we can furnish qualities to match any and every other make. If you have got used to some special quality of wheel, let us know what it is, and we can send you a Tanite Wheel of similar quality. Our regular classification of Saw Gumming Wheels is as follows:

CLASS 2. MEDIUM-HARD. This Wheel is THE STANDARD Saw Gumming Wheel all over the world. Probably seven-eighths of all the Saw Gumming Wheels used are "Class 2" wheels and keep its shape well. Some think it too hard, some too soft. We prefer the "Pocono."

CLASS 3. MEDIUM-SOFT. The same as to coarseness and fineness as "Class 2," but a softer, and therefore freer cutting wheel.

CLASS "POCONO." EXTRA-SOFT. This Wheel we present to all others. It is both finer in grain and softer than either of the above. As a Saw Gumming Wheel, Class "Pocono" is especially suited to those practical and experienced sawyers who know how to grind with a light touch, and who want a free cutting wheel that will not create much heat.

MILL REFUSE TURNED INTO MONEY

BY THE USE OF

Brown's Patent Shaft and Shingle Mill,

for making Shingles, Barrel Heading, Box Stuff, &c., from spalls, board trimmings, slabs, and mill waste generally, turning material otherwise worthless into valuable products. I have made arrangements with the patentee to manufacture and sell for the Dominion, have made and sold a good number of these machines which are giving excellent satisfaction and can give the best of references.

Our Steam Feed for Circular Mills,

is now the Best Feed where Steam is the motive power. It is easily operated, is simple, rapid, and seems never likely to wear out. Sixteen 16 ft. boards, or eighteen 14 ft. boards, have been cut by it in one minute. It is the established feed for steam mills, I make a specialty of its manufacture; will guarantee satisfaction.

Our Patent Twin or Span Circular,

with Steam Feed for Steam Mills, and Rope or Lash Feed for Water Mills is fast coming into general use. It is used in place of Gang Slabber in our best Canadian Mills. One of our Span Circulars which will slab logs 25 inches in diameter down to 2 and 8 inch blocks, will do the work of three laborers, with an immediate reduction in first cost, running expenses and labour. Two of these machines can be seen at work in Messrs. Gilmour & Co.'s Mill, Trenton, and Georgian Bay Lumber Co.'s Mill, Wantausibong and Port Severn. I am also introducing a new style of Self Engine, neat, substantial and simple, with Corliss Frame and Balanced Valve, all carefully designed and honestly made.

Covel's Automatic Saw Sharpener,

is now well-known and highly appreciated; when placed at work in the mill it sings out its own song, I keep it constantly on hand, ready for immediate shipment.

Our Standard Circular & Gang Mills & Machinery,

are too well known to need any reference, any further than to say that I spare no pains or expense to have my work all first-class and give satisfaction; and as I make Heavy Saw Mill Machinery a specialty, any party wanting a First-class Mill will find it to their advantage to give me a call.

WILLIAM HAMILTON, Peterborough Foundry and Machine Works, PETERBOROUGH, Ont.
