THE KELSEY WARM AIR GENERATOR

The attention of Architects and Builders is directed to the construction of

The Kelsey Warm Air Generator

which gives satisfactory results.

The Kelsey warm air Generator is built in six sizes, being composed in part of long hollow sections, the number of sections varying in the different sizes from eight to sixteen. Each section is an independent heater; besides assuring economy it overcomes that difficulty experienced by the common hot air furnace in conveying warm air through long pipes to distant rooms. The heating capacities range from 5,000 to 90,000 cubic feet.
