

of operation than the present type. I can speak with some assurance on this subject, of which I have personal knowledge, and I will discuss it with the grain commissioners and give them the benefit of the experience I have had.

Mr. JELLIFF: Has the minister any returns submitted by the Board of Grain Commissioners on overages from the public terminal elevators for the crop year 1926? I do not believe that report was received until

a short time ago and it would be interesting to discover why the Board of Grain Commissioners did not collect on these overages.

Mr. MALCOLM: I have a long statement here which I will send to my hon. friend.

Mr. JELLIFF: Perhaps the minister had better put it on Hansard.

Mr. MALCOLM: I will hand it to Hansard.

The statement is as follows:

Annual weigh-up of grain in public terminal elevators, at Fort William-Port Arthur, and Vancouver and interior terminal elevators at Calgary, Moose Jaw, Saskatoon and Edmonton, July 31st, 1926.

Summary of grain, and total value of same, comprised in that portion of surplus which is to be delivered to the Government under section 87 (4), Canada Grain Act, 1925.

Fort William, Ontario.

E. A. Ursell,

Statistician.

Board of Grain Commissioners.

Item agreed to.

Honorary Advisory Council for scientific and industrial research, \$170,000.

Mr. MALCOLM: This is one of the most important items in the whole Department of Trade and Commerce. We are asking for a small increase this year. It had been my intention in conjunction with the Minister of the Interior to ask the House this year for a substantial sum for the research council.

[Mr. Malcolm.]

Many of the older members will recall a speech made by a former representative of London in this House, Mr. Hume Cronyn, who in 1921 discussed the need of industrial scientific research. At that time the member for Prince, now Prime Minister (Mr. Mackenzie King), spoke on the same subject, which I believe is of interest to the whole Dominion from every point of view, industrial, agricultural, mining, fishing and forestry. It affects
