

From this point they walked along the Manawagonis beach, inspecting the excellent exposures of the Post-pleiocene formation shown in the clay banks and high hills of gravel along the shores. In the afternoon they visited the Fern Ledges to the eastward of Sand Cove, and studied the exposures of the Devonian sandstones and shales visible there, collecting ferns and calamites from these ancient rocks.

The zoological and botanical parties rambled around the vicinity of Sand Cove and Sheldon's Point, making collections

SAND COVE AND MANAWAGONIS.

Scale $1\frac{1}{4}$ mile to inch.

from the woods and fields of the neighborhood. A section of this party also made an excursion to Manawagonis Island to collect seaweed and marine animals along its shores.

The ladies' committee had in the meantime been busy and prepared at Mr. Manchester's "pavilion" refreshments for the excursionists. Here prizes were awarded for the best collec-
