Our Legal Adviser

COW MISREPRESENTED.—I bought a cow at a 12 months' credit sale. The cow was sold for six weeks calved. She turned out to be three months gone with calf. I have calved six months after I bought her. What I pay the full value for the note when due, or can I get reduction for misrepresentation? When should I complain now or when note due? Should I notify the bank that holds note or man who sold the cow?—A. W. York Co. Ont.

If your note comes into the hands of an innocent holder for value you have no defence, but must pay the full amount. As against the man who sold you the cow, however, if the matter were brought to court, you would be allowed the difference in value between the cow as represented by him and the cow which he actually sold you. If there is no great difference in value it would not be advisable to take this matter to court. If you think you have sustained any substantial damage make your objection at once.

LIABILITY FOR PREMIUM NOTE.—The Mutual Fire Insurance Company, in which my property is insured, have recently called on me for a payment of the premium note in full. It seems that the company is in difficulty and are calling on the policyholders to make good their losses. Am I compelled to pay the full amount of this note?—A. P.

The contract in question is one by which the insurance company agrees, in the event of loss by fire, to pay certain sum of money to be insured. The policy has been issued and is now current, and there has been no breach of agreement on the part of the company. The company, therefore, is entitled to the payment of the premium agreed upon. The premium agreed upon is secured by a note of \$94.50, and provides that this money shall be payable in such proportions and at such times as shall be required by the directors of the company. The agreement on the part of the insured is definite, and we cannot see any reason why the directors should not be entitled to call for payment of the note.

Cooperative Dairying in P. E. I.

(Continued from page 3)

One drawback to our dairy industry is that very little corn is grown. A large acreage now devoted to potatoes, which this spring are being sacrificed at 15 cents a bushel, would give a greater profit if planted with corn to feed dairy cows. A soil and climate that will grow 300 bushels of potatoes an acre, the average yield of dairymen in this county, would grow 15 tons of corn. But our people do not understand the nature and requirements of the corn plant and don't appear to be willing to learn. They know the nature and requirements of the potato, and, I suppose, it is just as well that they stick to it, particularly when the soil and climate seem to be the natural habitat of this valuable tuber.

COWS VERSUS FOXES

There are obstacles to be overcome which may have no connection with our unrivalled natural facilities for dairying. The dairy cow is our most profitable animal and greatest moneymaker, with the exception of the Island black fox. Both are natural products of the island soil and climate. Though we may not be able to sell a common "dairy" cow for five or six thousand dollars, the present price of a fox, yet, when we compare the two by the only true standard, that of service, we must conclude that the test of time will be in favor of the cow, for the greatest potential wealth will come through the class of animals that fertilize the soil.

Strip off the asparagus seeds before they ripen and burn them.

CALDWELL'S Cream Substitute CALF-MEAL

THE CALDWELL

is the next best thing to whole milk for vealing up or raising calves and it is guaranteed as such to the Canadian Government. You can raise as healthy calves on it as any man would desire and at a big saving in cost. Ask your Feedman about it, or write us for the proofs.

What Does a Silo Cost?

Experienced dairy farmers claim that a good silo will pay for itself the first year. That being the case it costs nothing.

AS a matter of fact, if you are keeping dairy cows or raising stock for the market there is no better investment which you could make which will pay you better returns than an Ideal Green Feed Silo.

The cost is a secondary consideration and it is not a question of whether you can afford to erect a silo this year but rather whether you can afford to be without one another winter.

A good silo is a necessary part of the dairy equipment of every cow owner who wants to realize a profit from his herd.

If you have no silo a little investigation will be sure to convince you that you ought to purchase one right away.

Don't buy anything but a wood silo. Cement, or stone, or brick not only cost a great deal more than wood in the first place, but there is too much waste in the spoiled silage with anything but a wood silo. Our silo book explains why so much better results can be obtained with a wood silo in our Canadian climate than with any other kind.

The shrewdest and best posted farmers in Canada are installing

IDEAL GREEN FEED SILOS

so rapidly that although we have doubled our factory facilities in the last year it is about all we can do to keep up with the demand

We are the oldest and best known silo manufacturers in Canada and thousands of our Ideal Green Feed Silos are in use on the most prosperous and best paying farms in the Dominion, and these silos have always given satisfaction.

If you have about made up your mind to build a silo this year you want to be sure and get your order in early so that we can make delivery before it is too late in the season.

Our Ideal Green Feed Silos are constructed from the very best material and by reason of the special solution with which we treat the staves our silos last three to three times longer than ordinary wood silos.

Be sure and get our free silo book
