LADIES ELASTIC CHEST EXPANDING STAYS. HERBERT'S ORIGINAL MANUFACTURE.

HERBERT'S ORIGINAL MANUFACTURE.
THE very lavourable manner in which the CHEST EXPANDING BRACES, manufactured by the Subscrisea have been received, and the benefit many persons
have signed they have derived from their use, has induced
him to give much attention to remove one inconvenience
occasionally alleged by Ladies to the Braces, that they
were insufficient to make their dresses sit w. ii, and he
move affers the CHEST EXPANDING STAY: as an articie well calculated to remove this objection altogether.
They embrace all that is essential in mays to make the
Dove sit well, with sapansion of the Chest and support
to the Spine. to the spine. The attention of Ladies is respectfully invited to the

M. HERBERT.

Ila 'as arg 24, 1-50.

IMPROVED

OBLIQUE INGUINAL TRUSSES. DELIQUE INGUINAL TRUSSES.

I HERERT respectfully informs Medical GentleM. Hen and the public generally, that he manufactures and has new on hand MPROVED ObliqUE INGUINAL TRUGSES, according to the ofinetraction of T
P. Tenle, Eagt, P. L. S., Surgion to the Leeds General
Informary, and which are so highly spoken of in the Medical Gazette, February 1, 1856. For the information of
these who cannot refer to the above work, it may he atuted, that these Trusts consist of "an elastic steel girdle,
a pad of varying form, according to kind of hern in. and a
spiral garing setting directly on the pad; elements which,
satisfing in various trusces heretofore known, are here combined in the construction of size." The "mode of strackment between the apiral and the pad renders any other flument between the spiral and the pad renders any other fisment between the spiral and the pad renders any other fa-tening unnocessary. An uniform pressure throughout the whole extent of the pad is thus salvatined; and the spiral, acting as a universal joint, allows the girdle to adapt itself to the varying movements of the budy without disturbing

the pad."

A full description of these invaluable Trasses cannot be given in an advertisement; but it may be stated that they have been shown to several of the most distinguished Medium. ical Practitioners of this City, who have expressed

unqualified approval of them.

For sale at low priors at M. Herbert's Establishm
Na. S. Angule Street. A liberal discount made to M.
sale purchasers. Oct. 26, 1850.

Preservation and Restoration of Sight.

For Near-Sightedness .- Close the eyes and v. across the eyes. This flattens the pupil, and lengthens or extends the angle of vision. This should be done several times a day, till shortsightedness is overcome.

For loss of sight by age, such a require magmilying glasses, pass the fingers or rowel from the outer corner of the eyes inwardly above and below the eye-balls, pressing gently against them. his rounds them up and preserves or restores be .. dat.

is not offered as anything new, though it leulable value. Prof. Bronson is going abou the country giving lessons for from \$5 to 250, to comble persons to preserve or regain their sight, in the above manner. He claims to be the discoverer of the idea; and it may be original with him. Yet, says the Phrenological Journal, it was known long before Bronson's birth. The grandfather of a female friend of the editor prac-

ved his sight so as to be able to read fine print when eighty-eight years old; and John Quincy Adams, in conversation with Lawyer Ford, of Lancaster, Pennsylvania, who wore glasses, told him that if he would manipulate his eyes with his fingers from their external angles inwardly, he would soon be able to dispense with glasses. Ford tried it, and soon restored his sight perfectly, and has since preserved it by the continuance of this

Phosphorescence of the Sea.

The phosphorescence of the sea, or that condition called by fishermen bring, when the surface, being struck by an oar, or the paddle wheels of a steamer, gives out large quantities of light, great peace. has been attributed to the presence of myriads of minute insects which have the power of emitting light when irritated. The night-shining nereis emits a light of great brilliancy, as do several kinds of molusca. The nereides attach themselves to the scales of fishes, and thus frequently render them exceedingly luminous. Some of the crustacese possess the same remarkable property; twelve different species of the cancer were taken up by the naturalists of the Zoire in the Gulf of Guinea. The cancer fulgens, discovered by Sir Joseph Banks, is enabled to illumi
K. Allisons; Union, Labrador, to do, Prince Albert, Fleet, Anuspolis. perty; twelve different species of the cancer nate its whole body, and emits vivid flashes of light. Many of the medusæ also exhibit powerful phosphorescence. These noctilucous creatures are, many of them, exceedingly minute. several thousands being found in a tea-cup of sea-water. They float near the surface in countless myriads, and when disturbed, they give out brilliant scintillations, often leaving a train of light behind them. By microscopic examination no other fact has been elicited than that these minute beings contain a fluid which, when squeezed out, leaves a line of light upon the surface of Kinnear; Halifax, Meagher, Boston, 3 days, to B Wiet the water. The appearance of these creatures is almost invariably on the eve of some change of weather, which would lead us to suppose that their luminous phenomena must be connected with electrical excitation.

Apples for Human Food.

On the use of apples as human food, the American Agriculturist remarks: "The importance of apples, as food, has not hitherto been sufficiently estimated in this country, nor understoo!. Besides contributing a large portion of sugar, mucilage, and other nutritive matter, in the form of ton, 46 hours, to B. Wier & Co. food, they contain such a fine combination of vegetable acids, abstractive substances, and aromatic principles, with the nutritive matter, as to act powerfully in the capacity of refrigerants, tonics, and antiseptics, when freely used at the season of ripeness, by rural labourers and others, they prevent debility, strengthen digestion, correct the putrefactive tendencies of nitrogenous food, avert scurvy, and probably maintain and strengthen the powers of productive labour.

"The labourers of Cornwall, in England, consider ripe apples nearly as nourishing as bread, and more so than potatoes. In the year 1801, a year of searcity, apples, instead of being converted into cider, were sold to the poor; and the labourers asserted that they could stand their work on baked apples, without meat; whereas a potato diet required either meat or flesh.

"The French and Germans use apples extensively; indeed, it is rarely that they sit down, in the rural districts, without them in some shape or other, even at the best tables. The labourers and mechanics depend on them, to a very great extent, as an article of fool, and frequently dine on sliced apples and bread. Stewed with rice, red cabbage, carrots, or by themselves, with a little sugar and milk, they taake both a pleasant and nutritive dish "

LETTERS RECEIVED.

Rev. J. Narraway, (remitt. per Mr. Metzler, 5s. 10d).

TO AGENTS.

We would remind our Agents that early remittances, in as large sums at one time as possible, are necessary, and are particularly requested, to enable us to meet our weekly liabilities with punctuality.

We have removed the Wesleyan Office to the Building formerly occupied by the late Mr. W. Valentine as a Daguerrian Office, in Marchington's Lane. Book and Jos printing executed with neatness and despatch.

Marriages.
