1 & 2 MYLES DOCK, TORONTO.

ROBT. MITCHELL & CO.

MONTREAL BRASS WORKS,
BRASS FOUNDERS & FINISHERS.
Steamfitters and Plumbers, Coppermiths, &
St. Peter and Craig Streets,
MONTREAL.

STEAM USERS

Attending the Exhibitions at Montreal and Toronto desirous of investigating how to
SAVE MONEY BY SAVING FUEL,
and at the same time secure
INCREASED CAPACITY OF STEAM POWER.

Are invited to call and see boilers in operation set with the JARVIS system of furnace. Among others in Montreal are those at Rogers & King's Iron Works, 64 Craig St.; Chas. Childs' Last and Lye Works, 112 Queen St.; and Miller Bros. & Mitchell, Engineers and Machinists, 116 King St. In Toronto at the extensive establishment of the Montreal Patenting Co. There are now over 1,000 boilers set this way in the United States and Canada. It is the same principle as the SIEMENS STEEL PROCESS—the waste gases utilized with hot air on top of the fire, which is the only way to obtain perfect combustion. Waste fuel used without blast! also screenings, wet peat, wet hops, spent tan and shavings, &c.

JARVIS FURNACE CO.,
(P.O. Box 33) 111 KING ST. MONTREAL.

BURNELL'S

FOUR-POINTED GALVANIZED STEEL BARB WIRE FENCING.

There are now before the public a number of Four-Pointed Barbs, which to the casual observer, are similar in appearance to the Burnell Barb which we are making, but a close examination of them will show the difference and their inferiority.

The Grand Trunk Railway Company of Canada give it a preference over all others, and have contracted with us for over one hundred tons of fencing for immediate delivery.

This Barb was patented in the United States in 1877, and is no infringement on any other patent, and we will defend dealers and consumers against the threats of pretended monopolists. We claim superiority for our Barb Wire over all others for the following reasons—

- 1st.—We use only the best quality of Galvanized Annealed Steel Wire.
- 2nd.—The two strands of No. 12½ Wire are twisted together just enough to allow for the contraction and expansion of the metal, caused by heat and cold, and not so much as to injure the structure of the steel.
- 3rd.—The Barbs on our Wire are four-pointed, thus always presenting a Barb laterally or at a right angle, which is a great advantage over the Two-Barb Wires, as cattle are unable to get against the fence to break it or push it down.
- 4th.—The Barbs are fastened to the Wire at intervals of 7 inches, in a manner entirely different from any other, being securely locked around and between both wires, so that they cannot slip or move toward each other, and they also prevent the untwisting of the cable should either wire get broken.
- 5th.—The machinery by which the Barbs are put on is so perfect that the Cable Wires are not injured or weakened by the process, as is the case with other Four-Pointed Barb Wires.

Manufactured by the CANADA WIRE COMPANY,
Montreal.
H. R. IVES, Manager.

AMES, HOLDEN & CO.

Manufacturers of and Wholesale Dealers in
BOOTS AND SHOES,
VICTORIA SQUARE,
